

Placing media improperly is one common problem across the board, be it a home user or office users. Usually, most vendors mark the printers with symbols that clearly indicate the placement of media. Here, we look at the envelope and the printed letterhead. We used the Canon LBP3200.

The tray in the printers has an adjustment knob, which slides in and out to provide a straight media path. Several printers have a detailed list of media sizes printed on the tray to facilitate quick placement. Place the envelope facing down if you are using the bottom tray. Adjust the knob to fit the media size by moving it inwards or outwards. Remember to open the back cover, which is the alternate output paper path. This provides a straight paper path eliminating bending of paper and therefore paper jams. In case of a top-loading mechanism, the print surface faces the user. Now, open a new document in Microsoft Word and type in the recipient's address. After that, go to **Tools > Letters and Mailings > Envelops and Labels**. A dialog box appears, providing you with two choices—"Envelope" and "Label". "Envelope" is selected by default; preview the address here and adjust its placement. Once these settings are through, click Print.

Shown in the figure is the Size 10 envelope placed face down for printing. The symbol on the tray clearly shows which surface will be printed on, with the help of the fold corner and parallel line.

Type the content in Word, and adjust the margin. Do that by shifting the text down to avoid printing on pre-printed content. Place the media face down with its topmost edge towards you. Different printers have different ways to insert media. Refer to the user manual for the steps you need to follow.

Print 'em cheap

The printer unit is the fastest we've seen, and prints are crisp and crystal clear. At scanning, the SCX 4216F is slower than the 4016. In the IT8 card tonal deviation test, the scanner unit on the 4216F performed no better than did that on the 4016. And in the resolution test, the unit was just mediocre, not detecting the finer lines. Copying quality was excellent, and copying speed was typical.

means lower cpp compared to any inkjet MFD.

Priced at Rs 45,000, the SCX 4216F offers good features at a competitive price, and should be considered if you want to replace all your ageing peripherals with a single, cost-effective solution.
