

Refilling the cartridges

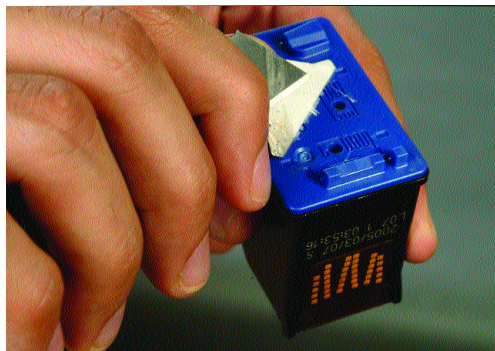

STEP 1 Locate the fill holes on the cartridges. Their position differs from one cartridge to another. Refer to the manual bundled along with the refilling kit for this information.

STEP 2 For HP cartridges, the fill holes are underneath the sticker on the top of the cartridge. Take a sharp object—a cutter for example—and lift one edge of the sticker to expose the holes under it.

STEP 3 You'll see five fill holes. Refer to the refilling manual to find out which one corresponds to which colour.

STEP 4 Now, take a refill syringe. Each syringe is demarcated into three parts. Each part equals one refill. Hence, each syringe gives you three refills.

STEP 5 Remove the rubber cap covering the tip of the syringe, place the tip near the fill hole and slowly insert the needle as far as it will go.

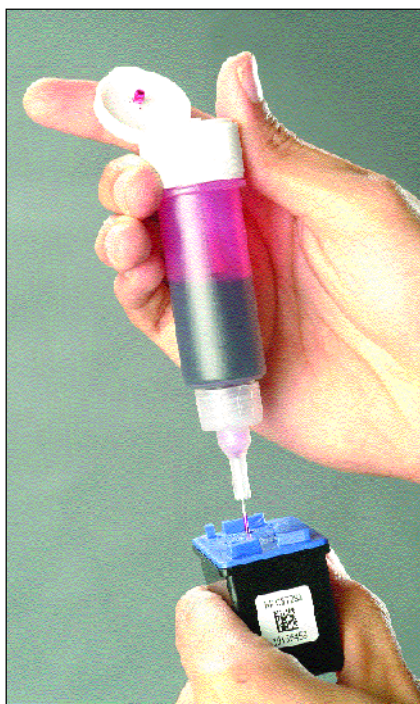

Peel the sticker from one corner using a sharp blade

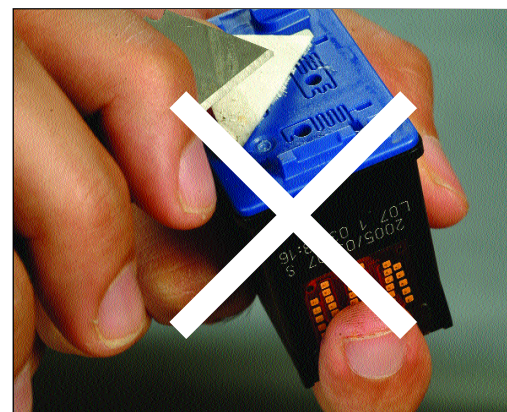

STEP 6 Once the needle is in, hold the syringe upright and open the top cap so that the ink flows down. Close the cap once the ink level in the cartridge reaches the lower mark.

STEP 7 Tilt the cartridge and the syringe to the horizontal position, and pull the needle out.

STEP 8 Repeat the above steps for each colour, and for the black cartridge.

Open the top cap so that ink flows due to gravity

Never place your finger on the circuit when holding the cartridge

TIPS

- Do not remove the sticker completely. Just pull out three-fourths of it, so that you can cover the holes again.
- After removing the rubber cap, hold the refill syringe horizontally to avoid ink spills.
- To avoid wastage, close the top cap before the ink level in the syringe reaches the next marker.
- Do not overfill the cartridge. This can lead to leakage.
- Wait for some time before pulling out the needle so that the ink in it is soaked up by the sponge in the cartridge.
- Before replacing the needle, see that there is no leftover ink that might dry and clog the needle.
- To clean the nozzle using the printer driver, go to **Start > Programs > Hewlett Packard > Printer assistant > Utilities > Printer maintenance > Clean cartridges**.
- Do not wipe the nozzle with the tissue, as this might damage the nozzle. Just place it on the tissue, and apply enough pressure on the nozzle so that it comes in full contact with the wet tissue.

Post-refilling procedure

Put the refilled cartridges back into the bay and close the top lid. Try printing some documents with varying colours and text. If the colours are not properly reproduced, clean the nozzle.

STEP 1 Remove the cartridges as mentioned in the earlier steps, and put them upside down on a table.

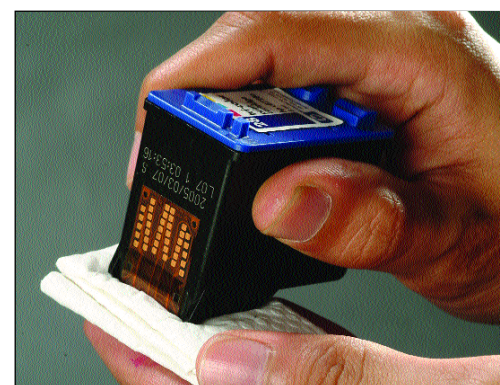

STEP 2 Take out the tissue provided along with the kit, and put some drops of its cleaning fluid on it.

STEP 3 Place the nozzle area on the wet tissue for a few minutes.

STEP 4 Replace the cartridge, and take some more printouts. If the colours appear faded, or you observe horizontal banding, try cleaning the nozzle via the printer driver.

Details	Refill kit	Original cartridge
Cost for colour refill*/cartridge (Rs)	400	1,100
Cost for Black refill/cartridge (Rs)	100	800
Total Cost incurred (Rs)	500	1,900

* Cost includes all three colours; each colour refill can be used thrice

Place the cartridge as shown above to clean the nozzle
