

FOR YOUR EYES ONLY

Paranoia about private data is a good thing. Find out how to lock your docs, erase your tracks, and more

Document security is a matter of concern for anybody, and in extreme cases, a matter of high anxiety. You may be a corporate employee worrying about whether prying eyes may lay see your report, or a home user worrying about other account holders perusing your data. Here, then are simple steps that ensure a basic level of protection and security.

Zip it!

The easiest way to protect files is to put them in a password-protected zipped file, using such software as WinZip.

With WinZip 9.0, you can secure files, encrypting them with the Advanced Encryption System (AES). This method, also known as Rijndael, has been approved and adopted
