

‘Accounts’ brings to mind the Chartered Accountant, which in turn brings in memories of the tax you paid last year out of your hard earned money.

Each year you resolve that the coming year, you’ll regularly monitor your finances, investments and budgets so you don’t land in no-man’s land in the month of March. And this, every year.

What you need in order to end the resolutions game is accounting software. We bring you eight accounting software to choose from, plus two tax software. We tell you all about the pluses and minuses of these, explaining the key features that a useful accounting software should carry.

Accounting needs of a typical individual are simple—your software needs to have a salary account, a couple of bank accounts and a few expense accounts. At the end of the year you print a trial

THE TAXMAN Cometh

Accounting software is the answer to the perpetual cycle of resolutions regarding how you’ll be managing your finances

balance and take it to your accountant, who then takes care of your taxes after taking some of your money.

The SoHo segment has different requirements: track needs to be kept about client information, incoming cash and expenses, TDSs and salary payouts need to be managed, etc. If the SoHo happens to be a trading firm, inventory management is needed as well.

There are therefore two software categories—those targeted at the SoHo segment, and those at individuals. Of course, the former will work for individuals too. All software start with catering to individuals first, and then to SMEs. We take some basic accounting software both with and without inventory management, which would suit the needs of both categories. We sought help from two accounting experts for an informed review—their opinions are in quotes.
