

An object of desire: The Palm Tungsten T3

I click photos on my Nokia, and show it to clients on the T3

Aneesh Bhasin
Digital Imaging Professional

probably the coolest PDA-phone you'd come across today.

Bhasin carries his T3 everywhere he goes. Yes, everywhere! The T3, which costs about \$400 (almost Rs 18,400, but available in India for Rs 30,000), comes packed with a 400 MHz Intel PXA255 XScale processor, and 64 MB inbuilt memory.

He even uses his T3 to connect to the Internet. Says Bhasin: "My T3, phone and computer are all Bluetooth compatible, so I can also shift files from one gadget to another, dial numbers and multi-task quite a bit."

The T3 is power packed—it has Image storage ("I click photos on my Nokia, and show it to clients on the T3," says Bhasin), a voice memo recorder, a universal remote control, the works. "The T3 is certainly more efficient and convenient than a laptop. It does just about everything," says the 19-year-old.

The T3's Omni Remote Pro feature lets you control any infrared remote controlled device such as a television, VCR and even the air-conditioner.

Says Aneesh, "The Omni Remote Pro has a longer range than ordinary remote controllers, so I can operate devices from anywhere in the house!"

own, the EOS 10D is just above the mid-range professional series cameras, and costs about \$1,300 (Rs 60,000). However, it comes with the amazing feature of a 90-degree tilt shift lens, which means that the camera can swivel on its axis, something that makes "impossible angles possible," Mistry says.

With a maximum aperture of 2.8, the EOS 10D has automatic colour and temperature bracketing and an individual Kelvin temperature setting, per frame. Auto-bracketing enables a user to shoot up to three frames (cold, daylight, warm) at once. "We can then pick the ambience of our choice. This feature makes the colour meter and the big box of filters redundant," he says.

His other little digicam gadget is a QP colour correction card—another first in India—to simultaneously colour correct an entire batch of pictures. While processing the image, the QP card helps create a digital image as close as possible to the subject.

His other favourite is the Ideazon keyboard, again something that isn't available in India, yet. It has removable sets of shortcut keys—one each for Photoshop, 3D Max, Dreamweaver, QuarkXPress, and other such imaging and desktop publishing software.

Aneesh Bhasin, a digital imaging professional from Delhi, says he is inseparable from his Tungsten T3, the top-end handheld from PalmOne, the same company that makes the supersuccessful Treo 600,

Ideazon keyboard: For all your graphics needs

My EOS 10D makes impossible angles possible

The peripatetic Bhasin is currently working on a book for professional photographers; and his T3 features prominently in it. The book, however, will not be on his obsession, but a workflow management tool, sponsored by corporates such as Adobe, Nik Multimedia, Corel, Ideazon, Lowproe and Sandisk.

Pawar, meanwhile, sits in his office, dreaming of his next big gadget. He promises it will be the Motorola MPx100, a smartphone that could just be next Treo 600 on steroids causing more envy among Pawar's tech-crazy friends. But that is just the situation he would love to be in. ■
