

input on more than one of the fields, then how do you decide which input box appears before which? In that case, you can control it by going to **Tool > Query > Parameters**. Here, enter the parameters with the exact name. Be careful to keep it in the order in which you wish them to appear. **E**

## Tip of the Month

### Easy Access to Frequently-accessed Documents

The Work menu is a great Word feature that few people know about. You can use the Work menu to keep an easily accessible list of your favourite Word files. Here is how you can add the Work menu to the toolbar:

1. Go to Tools, click Customize, and then click the Commands tab.
2. In the Categories box, click Built-in Menus.
3. Click 'Work' in the Commands box and drag it to the menu bar or displayed toolbar.
4. With the Work menu in place, you can add any open Word document to your list. Here are the options:
5. To add the current document to the Work menu, on the Work menu, click Add to Work Menu.
6. To open a document on the Work menu, on the Work menu, click the document you want to open.
7. To remove a document from the Work menu:
8. Press **[CTRL]+[ALT]+[-]**. Your cursor will look like a large, bold underscore.
9. On the Work menu, click the document you want to remove.

# Arrest that Song!

**Record Internet radio shows and your favourite all-time hits—BOOMBox is here for you**

**Y**ou finally got a 'broadband' Internet connection. Streaming audio beckons (streaming video needs the Indian definition of broadband to change)! You are sitting at your computer, listening to your favourite Internet radio channel, and a song you just love is aired. "Nooo! Damn! How do I record this?" you wonder. We will show you how

you can record your favourite Internet radio shows or just a few all-time-favourite songs.

You need to have a SHOUTcast compatible player installed, which supports the .PLS file extension. We will use a player called BOOMBox Online Radio Player—a small and intuitive online radio player. However, its best feature is the bundled streaming audio recorder.

Configuring this tool is a snap: Once you start the software, you can choose to either see a list of radio stations by category, or see a complete list that will give you more options to choose from. Click on the Refresh Radio List button to get the latest list.

You will see a list of radio stations displayed. Click on one, and you are shown a brief description, including the URL and the current song that is playing. Clicking on the Populate Now Playing button will show you all the songs playing on all the

radio stations in your list.

To listen to a station, click on Tune In. This launches your default media player, such as, Winamp. The song doesn't start immediately, as it is buffered first to ensure smooth playback.

Once playback begins, you can configure the recorder. Go to **Recorder > View Recorder**, which opens the Recorder window. Click on Advanced to see all the options. An option is the Advanced Song Change Detection feature cuts the songs accordingly to different parts. For extremely advanced audio editing, you'll need to find different software.

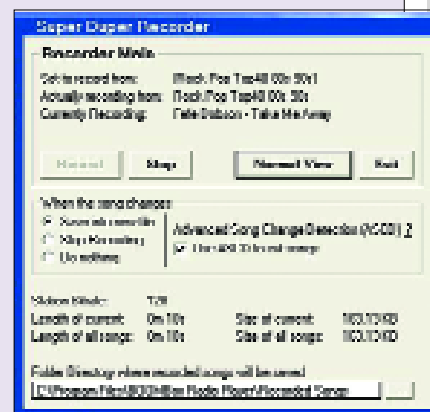

Once the recording is done, navigate to the folder with the recorded songs. The software

Click on 'Tune in' to launch the default media player

## Warning!

A lot of the content on popular Internet radio stations is copyrighted. Capturing this content is illegal! Make sure you only capture audio that isn't copyrighted.

ASCD (Advanced Song Change Detection) records each track separately on to your hard drive

saves the recordings as MP3s. So, you won't have to worry about converting uncompressed formats, such as WAV into MP3.

You can add radio stations to your favorites list and one-click recording. BOOMBox offers other amazing features, for free. Here's to never having to do without your favourite music ever again.
