

Plantronics DSP300USB Stereo PC

Headset

Here's one for the audiophile gadget freak: A USB headset! Install some software, connect your headphones to a vacant USB slot and enjoy your music. The drivers don't mess up your current sound configuration. The inline remote lets you control both the headphones and mic—the Plantronics USB DSP does the rest. The headphones distort at high volume, but are decent otherwise. This set's ideal for laptop users.

Canon i80

If you've got yourself a camera phone, and are a trigger-happy self-styled photographer, Canon just made your day- and your year as well. The new Canon i80 makes printing your pictures as simple as holding your infrared-enabled phone in front of the printer, and using its 'Send to IR' function. It prints at a resolution of 4,800 x 1,200 dpi, and on A4, 4 x 6-inch and 5 x 7-inch paper. Add to that features such as PictBridge and Bubble Jet Direct—all in a unit no thicker than a book—and you get must-have device.

Orite RAM-CAM

The Orite RAM-CAM is a USB 1.1 stick-cum-Web cam, and stores 128 MB of data. What can you do with it? Transfer data as with a normal USB stick, use it as a Web cam, or store as much video as the free space allows. The video isn't good enough though—the 350 K CMOS sensor records at a maximum of 640 x 320 pixels, at around 20 to 30 fps. But, hey, it's a USB stick-cum-camera!

Apple G5 system

It's the coolest one!

Even Steve Jobs knows this is one hot babe—Apple has placed nine fans in the G5 to keep it cool. Look hard at the rugged industrial design, and you'll find a seriously classy aluminium casing. Move, then, to the 21-inch cinema display, the dual 64-bit IBM PowerPC 970 2 GHz CPUs, the latest Mac OS X 10.3 with USB 2.0 and FireWire 800 ports, an FSB of 1 GHz and an animated (yet smooth) GUI that makes Windows XP look like a Neanderthal gollywog. Now tell us you are not impressed!

New&Notable

Biometric USB Flash Drive

Secure impression

Fingerprint recognition is fascinating. However, you have to set it up right. Get it wrong, and fascination turns into frustration. The Biometric USB flash drive is first detected as a normal flash drive with 119.3 MB of storage space. Run the bundled software and you're prompted to put your fingerprint on the flash disc. If you complete this step correctly, everything will run fine; if you don't, you might need to go as far as formatting the disc just to regain control. It's still the

best security around for your data!

Antec Laptop Cooler

Not hot at all

The way laptops are used, and their compact (read: crammed) packaging, adds up to heat galore. The Antec Laptop cooler is a plate with holes drilled in to dissipate the heat that builds up underneath a laptop. It also has two fans that rotate at 2,500 rpm, and draws only 2 watts of power from a USB port. It doesn't use up the port though as it has a piggy-back male connector. At just 750 gm, it doesn't add too much weight to your portable PC, and keeps you from getting singed thighs.
