NAM (Number Assignment Module) A circuit chip located inside a phone which stores your telephone number, lock code, timer reset code, network information and other operational data. The NAM is programmed by the service provider when a device is activated. Today's phones have EPROM type NAM and are keypad programmable.

OTA (Over The Air) The downloading of ring tones, picture messages, and other content to your mobile phone wirelessly.

PDA (Personal Digital Assistant) A portable, handheld computing device typically used for managing addresses, appointments, to-do lists and notes, but some newer models support wireless Internet
