First the System Requirements, official, but they might change before the final release

Minimum: 1.2 GHz P3 or Athlon, 256 MB RAM, DirectX 7 based gfx card with 64 MB RAM (GeForce 4 MX)

Recommended: A 2.4 GHz or equivalent CPU, 512MB RAM. Direct 9 based card with 128 MB RAM, (FX series, Radeon 9xxx series or above)

Storage requirments are not out but this game will come in both CD & DVD so I m assuming that there will be at least 5 CDs

The thing I hate about HL2 is this guy Gordon Freeman. He isn't going to speak in this one either. I don't like dumb people.

HL2 seems to be cursed! First, its source-code was stolen, now there are reports that the Valve guys have unknowingly shipped the HL2 dialogue script along with the Counter-strike source-code!! The script contains all dialogues in the game and also gives away the game's ending.

The steam hack was released on 16th itself. There are a couple of problems like AI shutting down itself, but the cracks right now are not nOOb friendly. Anyway, valve got what it wanted...read some dude saying that this was the first game he bought in 8 years!

(Read the review of Half-Life 2 on page 48)

Too Much Fun?

I am an avid fan of Digit right from its single CD days up until now in its new revolutionary avatar with a free DVD.

I love this magazine, and its innovative ideas, but I have one problem: why is there so much emphasis on games? Both your DVD and CD are replete with gaming content.

Many children, mostly from India's metro cities, spend almost four hours a day playing games on either their PC or

TV, spoiling their childhood in the process, and making them physically weaker. Research has also shown that gamers become short-tempered and violent individuals when they grow up.

Their gaming addiction also indicates an aversion to social life.

Admittedly, we cannot stop them completely, but we can at least stop encouraging them to play games.

Stopping distributing games would dent your company's profits, but I am sure Digit would be able to forego those revenues to help India's children.

Mahendra Bohara,
Ichalkaranji

The Editor replies:
Dear Mahendra,
As we progress on the technology evolution scale, it is inevitable that we encounter various adverse species along the way. Gaming is one such. Some of us may not like them, but their presence in our midst is inevitable.

Yes, it is true that some games numb a child's socialising and interpersonal skills; but gaming is like television—the responsibility of how much television to watch lies with parents. If parents are unable to exercise any kind of control over their child's gaming or television habits, he or she will inevitably be led on the wrong path.

Gaming is now as integral a part of our life as television and movies (in the US this year, the gaming industry made more money than movies), and it is something we will have to live with.

Besides, games are increasingly being used as interactive learning tools. Like all things in life, games, too, have their positie and negative sides.

Shutter Bugged

Digit reviews almost every aspect of personal technology ranging from motherboards and DVD drives to digital cameras and cell phones.

However, don't you think it is time you reviewed digital video cameras, which are fast becoming an integral part of our life?

My father recently gave me the chronological events since my birth until now, ranging from black and white photos of the '70s to the present colour images. This is surely the most valuable gift a parent can give his or her child.

I wish to present my 10-month-old daughter a video film of how she grew up. But there is such a huge variety of cameras in the market that it is almost impossible to know which to buy.

I am waiting for the day when Digit would review digital video cameras.

Jagadeesh Reddy,
On E mail

The Editor replies:
Dear Jagadeesh,
Your letter personifies Digit's new philosophy that technology must apply in everyday life to make it relevant to all of us. Technological progress cannot be on an esoteric plane.

We will definitely review digital video cameras soon. In the meantime, please feel free to write to Agent 001, our in-house market expert, who will be happy to do some hunting for the right digital video camera for you. His email ID is agent001@thinkdigit.com.

"Free" Software

I am a freelance developer for the last four years, working at a small town named Burdwan, near Kolkata. Like most people in the IT industry, I have been aware of software piracy in India, but got introduced to it, or rather its implications, only recently.

A few clients of mine asked me to build a software with the exact same features of Adobe Photoshop and Microsoft Word. Their budget? Rs 8,000!

When I told them it is not possible to
