Folder Options

☒ Index the following file types:

☒ Documents ☒ Pictures
☒ Music ☒ Videos

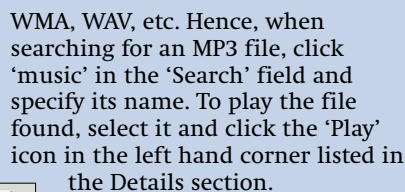

☐ Skip all files in this folder and its subfolders

OK Cancel

default folders monitored by CDS. To add a drive, say, D:, or a folder to this list, click Add in the 'Add a Folder' window and make an appropriate selection. Keep clicking OK to exit.

STEP 2 By default, CDS does not display EXE files in its search results. To turn this feature on, go to **Options > Advanced**. In this tab, add **‘.exe;’** in the box labelled **‘Additional file types to index’**.

STEP 3 Copernic has various search categories such as Emails, Music, Pictures, Videos, etc. These have predefined filters. Music, for example, has filters such as MP3,

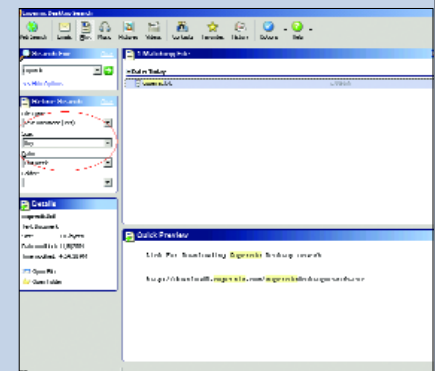

Refine your search by specifying information about the file such as its type, the date it was created, etc. Doing so narrows down the search. For example, go to the 'File Type' tab and select 'Text Document (.txt)' from the dropdown box to search for text files. Specify the time by going to **Date > This week** and press [Enter]. The 'Quick preview' pane lets you scan the contents of the file.

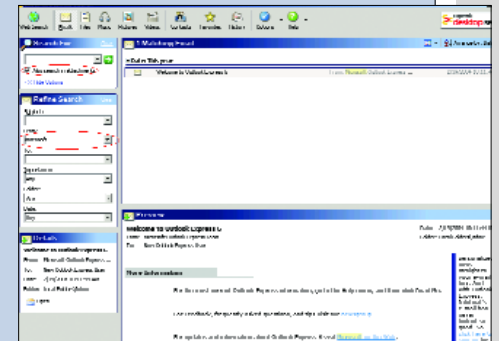

S By default, CDS does search within e-mails and attachments in Microsoft Outlook or

STEP If your folder goes through regular content updates, then you can schedule CDS to index more often. To do so, go to Options > Index update. In this tab, you can specify the time of indexing in

'Perform daily indexing tasks at' to suit your need. Note that by default, the folders in the indexing list are scanned after a period of 4 days. Tweak the 'Scan file folder for changes every' field to change the scanning frequency.

When searching through e-mails, you can see a preview of the mail and the attachments
