

Rocking To “iTunes”

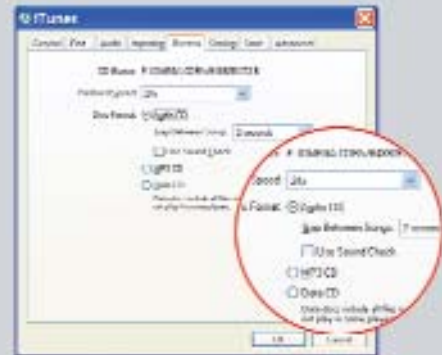

Despite there being no dearth of music players, Apple's iTunes has grabbed the limelight with its blend of features. The simple-to-use interface, and unique features including a lossless encoder makes iTunes a worthy try, if not a must-have jukebox. Here, we take you through some simple settings that you should do once you install the player to get the most out of it.

STEP 1 **Setting up the main Window:** The main window is configurable to show details apart from the usual ones. To configure it, Click “Edit” and “View Options.” This opens the “View Options” selection box. Select the options you want displayed in the main window.

STEP 2 **Setting up the encoder:** The AAC encoder used in iTunes is considered the best lossy encoder. Apple, has gone a step further to include a proprietary lossless encoder. To set this up, go to “Edit” and select “Preferences.” Go to the “Importing” tab, and select the type of encoder under the “Import using” menu. Select the one that gives you the best results. You can also do this through the “Settings” menu.

STEP 3 **CD burning settings:** iTunes can also burn your music compilations. To make the settings for the recorder, go to “Edit” and click “Preferences.” In the dialog box, click the “Burning” tab. This tab lets you select the speed at which you want to burn the CD. You can burn the compilation in three forms—Audio CD, MP3 CD or Data CD. Select the type you want, and just go ahead and burn it!

Keyboard shortcuts

Play/Pause:	Spacebar
Next Song:	Ctrl + Right arrow
Previous Song:	Ctrl + Left arrow
Volume up:	Ctrl + Up arrow
Volume Down:	Ctrl + Down arrow
Mute:	Ctrl + Alt + Down arrow
Close iTunes:	Ctrl + W
Add files to library:	Ctrl + O
Highlight current song:	Ctrl + L

Know your Player

The infobar—shows song information such as time left, total time and more

Search window—search your song by artist, song name or use other parameters

The burn button (single click to burn your compilation)

The browser window (browse your collection by Genre, Artist or Album)

The main window (displays song, artist name, and ratings, according to your customisation—refer Step 1)

Eject CDs

The visualisation button

The equaliser button (pops it open)

Playlist selection window (Source window)

Artwork window

Create new Playlist

Toggle shuffle

Repeat (Three modes)

Artwork window toggle switch

Select songs and then drag 'n drop them into the source panel, to create a new playlist entry.
