

want to change.

A Shortcut To Modify Bullets and Numbering

 Do you get tired of searching through menu commands to make changes to the numbering schemes in your Word documents? Skip the menus, and use this shortcut instead: to open the 'Bullets and Numbering' dialog box and adjust the numbering scheme, just double-click one of the numbers in the numbered list!

Create A Custom Word Template

 If you don't like the default font and other settings in Word, you can create a template of your favourite font styles and sizes and use it whenever you want. To create a custom template, first, on the 'View' menu, select 'Task Pane'. If the 'New Document' task pane is not visible, select it from the drop-down menu in the upper right corner of the task pane. Now, in the 'New Document' task pane, click 'General Templates'. In the 'Templates' dialog box that appears, select the 'General' tab, and click 'Blank Document' once to select it. This will be the base for your new template. Under the 'Create New' section, click 'Template', and click OK. In the new template, add any text and graphics that you want should appear in all new documents that you base on the template, and delete any items you don't want to appear. Make the changes you want to the margin settings, page size and orientation, styles, and other formats. Finally, on the 'File' menu, click 'Save', give your template a name, and then click 'Close' on the 'File' menu. Your new, customised template will then be available as a choice under 'General Templates' in the 'New Document' task pane.

Navigate Long Documents Easily with Hidden Bookmarks

 When you work with long documents in Word, it can be difficult to remember where certain text appears.

You can use hidden bookmarks to quickly navigate to that text. To add a bookmark, first, in your document, click where you want to place a bookmark. On the 'Insert' menu, click 'Bookmark'. When the 'Bookmark' dialog box opens, name your bookmark. Then click 'Add'. To find your bookmark, press [F5] to open the 'Find and Replace' dialog box. Click the 'Go To' tab, and type the bookmark name in the 'Enter Page Number' field. Click the 'Go To' button to get to the text you bookmarked. In Word 2002, click 'Bookmark' in the left of the 'Go To' tab, and select from the list of bookmarks that appears.

MS EXCEL

Keep Links Up-To-Date

 In Excel, you can create formulas in one workbook that link to data stored in another source workbook. But if your source workbook changes regularly—for example, if you update the source and save it under a new name each month—it can be very time-consuming to find and update links to the old source workbook. But there's an easy way to do this. First, open the workbook that contains the link(s). On the 'Edit' menu, click 'Links'. In the 'Source' box, click the name of the link with the

source you would like to change. Click 'Change Source'. Finally, in the 'Change Source' dialog box, click the source workbook you want to refer to.

Of course, to successfully change source workbooks, the linked data must reside in the same cells in the new source workbook as they did in the old one.

Removing All Smart Tags

 In Excel 2003, Smart Tags can be irritating if you never use them. To hide Smart Tags in a sheet, go to Tools > AutoCorrect Options. Select the 'Smart Tags' tab, and from the 'Show Smart Tags As' dropdown list, select None.

Generate Random Numbers In Excel

 Sometimes you may need to populate a sheet with random numbers. There's an easy function you can use to do this

Remove All Smart Tags!

Bet You Didn't Know

Random Numbers

Sometimes you may need to populate a sheet with random numbers. There's an easy function you can use to do this automatically. Type =RAND() in a cell to generate a number between 0 and 1. You can type =RAND()*100 to generate a number between 1 and 100. After entering a function, you can use the fill handle to quickly populate as many cells as you'd like with random numbers. To use the fill handle, click the cell, move your pointer over the lower-right corner of the cell until it turns into a black plus sign, and drag it horizontally or vertically across the cells you wish to populate.

automatically. Type =RAND() in a cell to generate a number between 0 and 1. You can type =RAND()*100 to generate a number between 1 and 100. After entering a function, you can use the fill handle to quickly populate as many cells as you'd like with random numbers. To use the fill handle, click the cell, move your pointer over the lower-right corner of the cell until it turns into a black plus sign, and drag it horizontally or vertically across the cells you wish to populate.

Results Without Formulas

 In Excel 2002 and above, using the Smart Tags, it's very easy to copy and paste a result without the formula. First select the cell that contains the data you want to copy. Press [Ctrl] + [C] to copy the cell data, and then press [Ctrl] + [V] to paste the data in a new location. Click the arrow next to the 'Paste Options' smart tag, and then click 'Values Only'.

Use Your Spreadsheet Like A Database

 You can use AutoFilter to analyse the data in your Excel spreadsheet based on specific criteria. For example, if you are a salesman with a spreadsheet listing all the clients you have in each region you cover, you can use AutoFilter to sort by a specific
