made the black background look like a shade of grey. In the 17-inch category, except for the Philips, all monitors returned a crisp line.

This test is important for those who use imaging software, where accurate reproduction of finer elements is important.

Ghosting

The ghosting, or streaking, effect is a major problem with LCD monitors. Ghosting is basically the presence of light or dark shadows that trail an image in areas where large changes in intensity are present. It is visible when images on the screen move at a speed faster than
