Overall (100%)	23.97	27.03	39.21	51.48	69.16	62.18

scored a blazing 41 MBps in the sequential read score test. To be fair to the others, though, the Seagate 400 GB Barracuda did score the same points as the Maxtor most of the time, except in the sequential/random write test, where it scored 28 MBps, as compared to the One Touch II's 31 MBps, and in the random read test, where it scored 31 to the Maxtor's 26 MBps.

The other drives did OK, but were really not up to the mark. The

Seagate 400 GB Barracuda and the Maxtor One Touch II were completely in a league of their own!

CPU Utilisation: The story is identical to that of the portable hard disk drives. Scores varied between 3.74 for the Maxtor 250 GB and 3.96 for the Seagate 160 GB and the WD 250 GB.

Real World Tests: We now come to the tests that separate the winners from the also-rans. In terms of pure data transfer, both from and to the drive, no drive

was even close to the Maxtor One Touch II. The drive absolutely blazed past the competitors, being at least two seconds faster in every test. It comfortably annihilated the competition, but this was totally expected, given the huge amount of onboard cache.

Maxtor One Touch II
