

On GoDaddy.com, for example, a .COM domain will cost about \$9 (Rs 390) yearly and basic hosting with 25 GB data transfer and 500 MB Web space will cost about \$4 (Rs 175) a month. This brings your total yearly expenditure to about \$57 (Rs 2,500). Thankfully, this is all you will have to pay. Using this article, you will be able to set up a personal or company Web site for exactly that price and not a paisa more.

Getting PHP-Nuke

Once you've bought your domain name and Web hosting, the next step is to download the PHP-Nuke installer from www.phpnuke.org. The latest version will cost you \$10 (Rs 435) to download, but they offer the previous version for free. So, as of the writing of this article, if the latest version is 7.8, you can download version 7.7 for free. The latest free version is available at http://snipurl.com/digit_php.

Installing PHP-Nuke

Once you have downloaded the file, unzip it to your hard drive. You will see three folders—'html', 'sql' and 'upgrades', along with multiple text files.

Since you are freshly installing PHP-Nuke, all that concerns you is the 'html' and 'sql' folders. The 'upgrades' folder

Unzip the PHP-Nuke installer to your hard drive

is meant for those of you upgrading PHP-Nuke to the latest version. The first thing you should do is read the 'Readme' and the 'Install' text files, as you should do before preparing to install any software.

Now all you have to do is follow the step-by-step instructions below to install PHP-Nuke.

Creating A New MySQL Database

A MySQL database is what a PHP Web site uses to store data. It reads the MySQL database and displays content, and the settings that you select.

You can create a new SQL database from GoDaddy.com's control panel

When you sign up for Web hosting, you will be told how to control your databases. Most hosting companies offer a simple phpMyAdmin or mysqladmin front-end for managing your databases. In our example, using GoDaddy.com's hosting package, we got an allocation of one database, which we created from our account at GoDaddy.com itself.

Whether your Web hosting provider offers mysqladmin (top) or phpMyAdmin (bottom) control panels, just look for the "SQL" link to upload your "nuke.sql" file and execute it

You will have to create a database here and call it anything you want. Now you will have to use the phpMyAdmin or mysqladmin front-end to create the hundreds of tables and thousands of fields in MySQL that PHP-Nuke needs.

Fortunately, all you need to do is find a link called SQL, as shown in the accompanying screenshots.

Adding PHP-Nuke Tables To The Database

Once you click on the SQL link, you will see something simi-
