Was little excited when I saw the

BIOMETRICS on cover... I thought this time

DIGIT covered lot of articles on Biometrics... I

thot *A Biometrics Special Issue*... wow!

Unfortunately, It wasn't. Article was good,

but kind of small :(

Thanx for PDFs... as I forgot my last month's issue in the train! Lol... this month I realized tht CD & DVD contents are different for the last couple of months... lol... I used to ignore CDs thinking it's all n DVD... !!

Received my issue tday due to mumbai rains. Excellent Cricket 2005 review by Raaabo but c'mon u can win a game easily. Its not that difficult. The Q&A and other regular sections are good. Yet to go through all the contents but overall looks ok. The editor's post abt improvement in quality of digit is not correct. Maybe quantitatively, digit has improved.

More contents due to that Fast Track booklet and I appreciate that but quality needs a lot of improvement. Even the paper quality of last couple of issues is not upto the mark. I think you people should come up with more interesting articles!

I must say the Fast track was superb this

time round. Although I had a

fair bit of knowlegde in most of the things written down; but then the "fair bit" was enhanced like hell!!!!. Make no mistake about it, this was an awesome read.

i read the entire thing on my journey in the train. The Magazine was good (although I am not interested in MFDs and printers). Another thing: has the magazines paper quality reduced???

All in All hats of to the Fast Track Writers

Four Marvellous Years

First of all, kudos for bringing out such a magnificent tech marvel and congrats for completing four successful years as India's best tech magazine. I am a budding geek and although I am not a subscriber, I keep an eye on every issue of *Digit* and buy the best of the issues.

Your 4th anniversary issue was really above par but I regret to inform you that I was unable to enjoy it fully since the DVD had a corrupted structure...

I hope in future you will not give me a chance to complain. I bought your July issue too, which was excellent; especially the article on gadgets was awesome. Hope you will keep bringing such excellent issues and tools through your DVDs and CDs.

Rohan Malik

New Delhi

Dear Rohan,

Please accept our sincere apologies for the damaged DVD. We have forwarded your problem to the Help Desk and you should have heard from them by now. Thank you very much for your kind words and we assure we will do our best to continue providing you the very best.

I Am Now Tech Savvy!

I had been suffering from a phobia of computer jargon till I started reading *Digit*. Earlier, I used to see the huge packet of *Digit* with CDs and wonder how people read this hi-fi magazine... I would just console myself saying "they must have born with extraordinary brains".

But thanks to *Digit*, now even I am comfortable with most of the terminologies and am now considered among the tech-savvy people in my college! I hope *Digit* will keep on injecting the technological fuel in me!

Vineet Gaurava

Bangalore

Dear Vineet,

It is our pleasure to have been able to turn you into a 'tech savvy' geek! And no, you don't need to have extraordinary brains to understand *Digit*. That's our whole aim: Make technology understandable. Keep reading!

Computing Nirvana

I recently read the editorial on your latest issue of *Digit*. It really made me think. It made me think whether we should be made numbers or whether we should fight for our own privacy? It is a question that has been asked since the Internet was created. Man needs both, his personal space and peace of mind.

The Net, unfortunately, cannot provide both. We have to learn to compromise if we are to get anywhere. In the real world, do people mark us as numbers? Do they come up to us and ask us what we have been doing every 10 minutes? No. But, in the digital world, this will happen soon enough.

As you so rightly stated, all Net users will be classified by numbers and will have neither a real identity nor privacy. All they'll have is a false sense of security.

So, no matter what safety precautions we take, there will always be those who will find a way around it. But there is an old saying, "The darkest hour of the night is just before dawn".

That is the one sparkle of light and hope that we must cling on to if we are to make to computing nirvana.

Manik Sinha

Via E-mail

Dear Manik,

Well said. Nirvana is "the state of being which follows the state of happiness in the growth of the self". Like Nirvana in real life, computing Nirvana can also be achieved only through self discipline and the state of happiness preceding it can only be achieved through self knowledge. Before I sermonise any more, suffice to say that knowledge is the biggest step on the way to Nirvana and educating yourself the only way to it!

The Price Hike Is Justified. Or Is It?

I am a regular reader and a subscriber of *Digit*. To me, it is like 'a drug for my life'! Each month I wait for my *Digit* and the first week of each month is very crucial time for me for I must get my issue before the 7th or 8th of each month!

One thing I would like to tell all readers is that the rise in the price from Rs 100 to Rs 125 was not too much considering all the things provided by *Digit*, which includes a DVD, a CD, Fast Track and not to forget *Digit* itself.

Regardless of what others pay for the magazine, I get my copy at Rs 66.66 per month because 'wise men subscribe when
