Every month, *Digit* will carry a caption for a photo. Come up with something funnier, and beat the *Digit* team at their own game! Entries accepted by the 15th of this month.

Present costs for handsets include all electronic components, the printed circuit board, connectors, casing with keypad and display, all software components, rechargeable batteries, charger, packaging and documentation.

Infineon's platform provides all the electronic hardware and software components needed in dual-band handsets complying

with the GSM900/1800 and GSM850/1900 standards. It includes a single-chip GSM radio/baseband, other RF components, power supply, memory, operating system, hardware drivers, GSM protocol stack and a reference MMI (Man Machine Interface) for simple and intuitive use of SMS and telephone functionalities. Volume production is expected to start in the first quarter of 2006, which means that ultra-low-cost handsets could be in the shops a few months later.

Power consumption has also been optimised so that cheap rechargeable batteries such as nickel metal hydride (NiMH) AAA micro-cells can be used to power the phone. With standard rechargeable mobile phone batteries, an

estimated standby time of more than ten days and a talk time of four hours is what the company is projecting, once the platform comes into use.

IMAGINE IN INDIA

MS Brings Global Contest To India

Microsoft has announced that India will be the venue for Imagine Cup 2006, an annual worldwide contest held by Microsoft to help students across the world showcase their software development skills.

The contest aims at empowering students to apply their creativity, knowledge and technical abilities towards making the world not only a more connected place but also a better place through technology.

In keeping with this, the theme for next year's

contest is "Imagine a world where technology enables us to live healthier lives." India has emerged as the world's IT nation with diverse technology talent, making it an ideal destination for a global showcase of innovative solutions.

This announcement was made at the Imagine Cup 2005 world finals, which recently concluded in Japan. Over 16,000 students from 92 countries participated in the contest this year. Nearly 6,000 of these participants were students from India, making it the country with the second-highest entries worldwide.

The contest includes nine 'open' categories such as Software Design, Technology Business Plan and Rendering, and three special categories created only for school students.

The theme for Imagine Cup 2005 was "Breaking down Boundaries", and students were encouraged to conceptualise technology solutions to help address emerging social issues.
