

Watch the telly like never before... with LG's new Wi-Fi enabled LCD TV

Fed up of watching TV in your living room? Hate the messy cable wires when you move the telly in your bedroom? Well, bid your miseries goodbye with the new LG 15LW1R, a 15-inch LCD TV enabled with Wi-Fi.

It's screen is pretty light at just four kg and measures a mere 45 x 30 x 5.6 cm. It supports S Video, Composite Video and has a 16 millisecond response time—fairly fast for a TV. LG has lent it a really large 160-degree viewing angle. It also has in-built speakers which seem to be a bit low on power at three watts each, but then you can always use a pair of headphones and enjoy the audio!

All you need to do is connect every single video input (from the cable wire to your DVD set) to the base unit of the LCD TV, and set the base unit in any place that catches your fancy.

This unit will then transmit all video feed to the screen using Wi-Fi up to an enormous 115 feet—you can freely move the screen within that area. Unless you live in a place that's miles away from civilisation, you can watch the TV in any location of your house! Now that's what we call portable home entertainment!
