Rules and Regulations

Readers are requested to send in their answers by the 15th of the month of publication.

Employees of Jasubhai Digital Media and their relatives are not permitted to participate in this contest.

Readers are encouraged to send their replies by e-mail. Jasubhai Digital Media will not entertain any unsolicited communication.

Jasubhai Digital Media is not responsible for any damage to your system that may be caused while you are trying to solve the problem.

Make The Safe Mode Boot Option Appear Every Time Windows Starts Up

To make the safe mode boot option appear every time Windows starts up, use the following steps.

1. In Windows XP, right-click the 'My Computer' icon. Select 'Properties', and then select the 'Advanced' tab.
2. Under 'Startup and

Select the Advanced tab in System Properties

Recovery', click 'Settings'.

3. In the 'System Startup' section, click 'Edit'. The 'boot.ini' file will open in Notepad.

4. Save the file as 'boot_ini.bak' as a backup option in case something goes wrong.

5. Now in the boot.ini file, under [operating systems], locate the operating system entry that you want to boot into safe mode, for example, the second entry as below:

```
[boot loader]
timeout=30
default=multi(0)disk(0)
rdisk(0)partition(1)\WINDOWS
[operating systems]
```

Startup and Recovery Options

- multi(0)disk(0)rdisk(0)partition(1)\WINDOWS="Windows XP Professional"
- /fastdetect
- multi(0)disk(0)rdisk(0)partition(3)\WINDOWS="Windows XP Professional"
- Safeboot" /fastdetect

You can modify the entry in the second line by adding "Safeboot" after "Windows XP Professional" to distinguish between the two OSes.

6. In the second entry, after "/fastdetect", add the following line:

```
/safemode:minimal /sos
/bootlog /noguiboot
```

The [operating systems] section of 'boot.ini' file should now look like the following.

```
[operating systems]
multi(0)disk(0)rdisk(0)partition(1)\WINDOWS="Windows XP Professional"
/fastdetect
multi(0)disk(0)rdisk(0)partition(3)\WINDOWS="Windows XP Professional"
```

- Safeboot" /fastdetect
- /safemode:minimal /sos /bootlog /noguiboot

7. The other Safe Mode options are as follows:

Safe mode with networking switch:

- /safemode:network /sos /bootlog /noguiboot

Safe mode with the command prompt switch:

- /safemode:minimal (alternateshell)/sos /bootlog /noguiboot

Enable VGA mode switch:

- /basevideo

Debugging mode switch:

- /debug

Here, we have used only the first mode—safe mode. A combination of switches may be used if required.

8. Save and close the file.

9. Click OK twice to exit

The boot menu shows the 'Safe Mode' boot option

System Properties.

10. Restart the computer and select "Windows XP Professional Safeboot" to boot into safe mode. (If something went wrong—like if you see an error message—replace 'boot.ini' with the 'boot_ini.bak' file.)

This solution will also be put up on www.thinkdigit.com
