Microsoft To The Rescue

A better of understanding Microsoft.com can give you the edge you need to get ahead at work...

Bhaskar Banik

Ninety per cent of computer users worldwide start with Microsoft Windows installed on their computers. Most users today are actively involved with Microsoft products—using, developing or testing them.

Though Microsoft's software products are easily the most popular, most users also face issues with them on a regular basis. There are system crashes, application issues and of course bugs during coding. However, what most users are not aware of is the dedicated group of Microsoft Web sites that provide support for all its products.

Most users are also not aware that Microsoft is generous enough to offer resources to the public in general, irrespective of whether your software is pirated or not. They provide immense resources that can get you out of the stickiest of situations. This article will walk you through the Microsoft.com, and tell you about its support Web sites for both users and developers alike.

Microsoft Support

Most of us have seen the "Blue Screen of Death" at least once during the time that we have been

using our computers, irrespective of the flavour of Windows used. Microsoft.com is the mainstay for all your support related queries that you have about your Operating System, (even the now archaic Windows 98).

The Web site looks a tad cluttered, but don't feel intimidated, all you need is a little patience. Look for a heading called "Solution Centers" and click on it. Here you will find 'Solution Centers' for all Microsoft products, including Windows Media Player and the Xbox.

Let's consider a situation where you get an "Illegal Operation" error in Windows 98. To find a solution for this, you can either use Google, or you can visit the Microsoft Web site and paste these two keywords in the box called Search KB (Knowledge Base).
