

Web as a tool for providing knowledge resources, is that there are no limitations.

At the site mentioned above, you will get access to tons of information that will keep you engaged for hours, and help you understand how to get more out of your Microsoft Office applications.

There is a lot that you can do on this Web site: for instance, you can use the "Demos" feature of the Web site to learn Office skills in a jiffy. There are so many downloads for your Office suite, such as Clip Arts (our favourite), media, templates and more. In fact, there's so

The Microsoft Office home page

much available that you're likely to run out of hard disk space if you try to download them all!

You can also suggest new Office online content by sending feedback to the brains at Microsoft, asking them to create more exciting content for you. Another popular resource here are the freely available update packages for all versions of MS Office. If you are using an older version of MS Office, you can also choose to download a trial version of the latest release and check out the new features.

A section called Work Essentials deals with making MS Office work for professionals the way they want it. There are other sections specifically dedicated to provide information to varied groups of professionals, from elementary school teachers to real estate agents and travel and tourism professionals. There is information for everyone, and all you need to do is assimilate it all to become an MS Office whiz.

Another very useful section is the Office Assistance section. This section deals with the utility part of Office, such as tips and tricks and guides that will help you work better with MS Office without any headaches. There is something for everyone in this section. For instance, you can get the low-down on how to use watermarks, or add music to your presentations, and even stuff like creating flowcharts in PowerPoint. If there's something you want to know about Office, you will find it here!

Another interesting section is the "Office Marketplace" where software from third-party software developers are showcased. These software cater to the wider range of needs by adding

Tips for using Microsoft Office better

Lesser-known Sites

We have mentioned some of the most prominent Microsoft Web sites in the article, but there are a few more portals that might interest you as well.

Microsoft TechNet

(<http://technet.microsoft.com/>)

This site deals with core Microsoft technologies, including product security, and posts security bulletins at regular intervals. This is the place where updates and patches (or information about them) for Windows make their first appearance.

Microsoft TechNet

MSDN Lab

(<http://lab.msdn.microsoft.com/>)

To put it in a nutshell, here's what the Web site has to say about itself: "The MSDN Lab is a highly experimental place where we can try something new, test out beta applications, and most importantly, gather feedback from the developer community on potential new additions to MSDN Online. Features which succeed will hopefully migrate over to the 'regular' MSDN site. Less successful features will be retired or revised."

MSDN Labs

Microsoft Beta Testing

(<https://beta.microsoft.com/>)

Most people do not know about this Web site. It is meant for users that are interested in beta-testing Microsoft products. The site is a secure site (https), and you will need to register with Microsoft to access it. Whether your registration is accepted, however, is solely at the discretion of Microsoft.
