COMMUNICATE BETTER

A PC can do so much more for your office than just run accounting software—combined with an MFD, it can take care of all your communication requirements!

Robert Sovereign-Smith

The PC has come a long way over the past decade or so. What started out as a glorified calculating machine and word processor has now taken over our lives.

And in no place is this more evident than at work. A lot of SoHo setups will not be able to function if you take away the computers. So many business opportunities have sprung up just because of the PC!

But we know all this...

What we don't realise is that some uses of the PC have been forgotten. Modems, for instance, are no longer used by most businesses in cities, thanks to increasing broadband penetration—indeed, Internet connections are mainly LAN-based now.

Convergence, also, has played a role in reducing the number of peripherals you had to connect just to accomplish simple tasks such as printing or scanning documents. Enter the Multi-Function Device—earlier the jack of all trades, and now master of all too!

Communication

Whether it is businesses exchanging e-mails across the world, or the person sitting next to you at work sending you a joke about the boss in the form of an IM message, it's all communication.

The largest library in the universe, the Internet, is based on communication; the lowest common denominator of technology, e-mail, is also based on communication.

Again, we know this...

The PC is powerful, and combined with a worthy tool such as a basic MFD, can do a lot more than we allow it to. Most of us never use our PCs to their full potential. For example, we still have fax machines in our offices, which print a lot of junk faxes on expensive fax paper. Why?

Fax

Though there may be hundreds of similar or even better software available today, WinFax was once the most popular fax software. In the time of modems, not too long ago, WinFax saved us many a pretty penny on fax paper and even fax machines!

Modems were then a must, and 56.6k voice, data and fax modems were the in thing. Since you needed a phone line and modem to connect to the Internet anyway, spending a little
