

TISSOT T-TOUCH

What do you want in a watch? A timer, stopwatch, accurate time, and an alarm, right? How about maybe a compass, a thermometer and an altimeter? No, we haven't lost our head—such a product does exist.

What's better is that it's a touchscreen wristwatch and not some bulky device you would have to lug around in a bag.

Also, the fact that it's good-looking and has the Tissot label makes it even more desirable, don't you think? The Tissot T-Touch, a first-of-its-kind wristwatch to include all these features in a brilliantly-finished chrome-metal casing is something you simply must have on your wishlist.

In all, there are eight functions on the watch including the Altimeter (in feet and metres), Chronograph (split and add time), Compass, Alarm, Thermometer (in °C and °F), Barometer as well as Date and Time (with a choice of 12H and 24H).

Operated by gently tapping on the each of the crystals underneath the watch face, you can activate any of the seven functions. This simple feature allows quick access to the features, unlike in many other watches where you need to scroll through to access the functions.

Although the touch-sensitive display is the T-Touch's main feature, other features are just as impressive. Of course, most of these features are useless for the average day in the office. But if you are an active person with an interest in hiking, climbing, or swimming, you'll find these functions very handy.

At approximately Rs 28,000, the T-Touch is not too expensive for a watch with so many functions. Hey, you wouldn't be buying it to wear it to the movies anyway, would you?

Rs 28,000

OMEGA SPEEDMASTER X-33 MEN'S PILOT WATCH

A Quartz watch with broad arrow hands, tachymeter bezel, sapphire crystal glass and 3ATM water resistance, the Omega X-33 is something to die (or kill) for!

This watch looks as good as a watch possibly can. The Omega Speedmaster X-33 simply leaves you awestruck from the moment you lay your eyes on it.

It is equipped with a battery that will last 24 months on the average with the alarm and light in use. If some of the functions are not used often, battery life extends to almost 36 months. That gives you six months to get to the moon at closest passage, a year on the Martian surface, and six months to return! Incidentally, that's what the watch has been designed to endure. What's earth?

The X-33 is equipped with a digital readout in the centre that displays time, alarm status, Mission elapsed time, mission elapsed alarm, Digital Universal Time (DigiUT), its alarm, and yes, countdown and chronograph.

The dial is covered with a scratch-resistant sapphire crystal and is encased in a solid titanium case and bracelet. You want the price? It's about Rs 1,30,000. What did you expect? It's supposed to last a trip to the moon!

Rs 1,30,000

CASIO PRG 80 1V

Another watch for the outdoor person, the Casio PRG 80 1V, too, packs in some super features. Scoring over the competition, this watch has a solar power cell in addition to a normal cell.

One of the main problems in using a watch is trying to view it in the dark. If you thought Indiglo was the pinnacle of watch lighting, wait till you see this. The PRG 80 incorporates an Auto EL backlight that automatically deactivates when the surrounding light is sufficient, and activates it under dim light or dark conditions. No more fumbling for the light button in the dark—on your wrist, anyway!

Other features include an inbuilt compass, altimeter, barometer, and thermometer in addition to the usual world time, stopwatch and timer. Before you start wondering, yes, there is an alarm. Actually, there are five!

Of the special features, the compass uses an inbuilt direction sensor to detect the magnetic north, while a pressure sensor detects changes in air pressure and converts the result into an altitude of up to 10,000 metres. The Height Gain function sums all the metres you may have climbed, and you can see the total ascent at a glance.

Inbuilt pressure and temperature sensors measure the barometric pressure and the temperature respectively, giving you all the necessary readouts at the push of a button.

There are other, basic functions, such as world time, which displays the current time in major cities and specific areas around the world.

The five daily alarms remind you about recurring events with an acoustic signal at the time you set. You can also activate the hourly time signal that indicates each full hour. The damages? About Rs 15,000. Not a bad deal at all!

Rs 15,000
