Stuffonmycat.com

We know the Internet is a place that offers a large audience anonymity, and the option of going absolutely crazy. Roll all these into one and what you have is www.stuffonmycat.com. What's that, you ask? How dare you? Have you not visited it yet? Loser!

The disclaimer and terms of service on the top say: "Do you like to put stuff on your cat? Stuff + Cats = Awesome. So do we, show us some love and head over to our submissions page to find out how to send us a picture. If your submission meets our 'rigorous' standards in the fields of quality and awesomeness we will put it up for all to see."

Rush now and don't forget to include a small donation through PayPal. What for we don't know yet.

The layout of this site is not the problem. It's pretty blog-like and offers decent navigation. It's the content and number of regular viewers that the site has which has left us baffled. For once, we also have to ask "What Were They ALL Thinking?" Sharing information about pets is all right, but getting

your pets to pose with atrocious stuff and photographing them to circulate on the Internet is totally uncalled for.

The links "Food on my cat" has felines heaped with assorted goods from pizza slices, beer bottles, bananas, corn cobs to noodles. And the 'Tech on my cat' link has it all—from floppy disks, CDs, keyboards to other gizmos dumped on the furry animals. The less said the better. Somebody needs to call PETA.

REMEMBER THE MISSION

Another 300 Years For Google

Remember Google's mission? The one about making the world's information accessible? It goes, "Google's mission is to organise the world's information and make it universally accessible and useful."

CEO Eric Schmidt was speaking at the US Association of National Advertisers' annual conference in Phoenix, when a member of the audience asked how long it will be before Google fulfilled its mission.

"We did a math exercise and the answer was 300 years," CNet quoted Schmidt as saying. There was a clause, however: "The answer is it's going to be a very long time."

So maybe he was joking about the maths. Schmidt estimated that out of the five million terabytes of information in the world, only 170 have been indexed so far.

It's an interesting exercise if one gets down to it: research on how much data is being produced every day, on how much data libraries contain, and so on. It could be fun, but probably not worth it.

How did Schmidt have the figure right there in his head? Well, he is the CEO of Google, but then again, something tells us he was speaking off the top of his hat.

There's another thought, though—pure fantasy, of course: what if Schmidt had *actually* done his math? What if *everything* were to be indexed one day? It's an exciting thought initially, but then, nah... we'll all be dead by then. ■

South Asia Earthquake: Another Deadly Disaster

I just woke up on a Sunday morning excited to have a hearty lunch at the Waterfront near Georgetown. I was so sure it's going to be an enjoyable weekend since tomorrow is a holiday, Columbus Day. I wasn't planning to blog today, I wanted to relax and spend some quality time with my family.

I started with my usual routine of checking my e-mail, and the Yahoo news caught me and got me engrossed clicking on the related news, photos, videos of the South Asia Earthquake which happened 50 minutes ago.

My heart was crushed even more when I read this part in one of the articles:

BALAKOT, Pakistan - Villagers desperate to find survivors dug with bare hands Sunday through the debris of a collapsed school where children had been heard crying beneath the rubble after a massive earthquake killed more than 20,000. (READ FULL STORY: Survivors Sought in South Asia Earthquake)

InsideOut and About

http://blog.insideoutmag.com/outabout/2005/10/pakistan_earthq.html

Pakistan/India Earthquake Coverage

We're sure you've heard about the terrible earthquake in Pakistan by now and are as sad as we are.

An earthquake of 7.7 magnitude hit Pakistan early on Saturday and the death toll could be as high as 20,000 if not more. The Associated Press reports "President Gen. Pervez Musharraf called Saturday's magnitude-7.7 earthquake the country's worst on record and appealed for urgent help, particularly cargo helicopters to reach remote areas cut off by landslides." Aljazeera is reporting up to 30,000. "There are cities, there are towns which have been completely destroyed. Muzaffarabad is devastated," minister Tariq Farooq told Aljazeera on Sunday, referring to the capital of Pakistan's sector of disputed Kashmir.

The Grape's Vine

Pakistan Quake Complicates War Efforts

The devastating earthquake that struck the Kashmir section of Pakistan has added major complications to the US lead War on Terror. With estimates of a death toll possibly topping 30,000, the Pakistani military will naturally be redirected to provide much needed assistance in the ravaged region. Currently, the Pakistani military is being used to secure the border with Afghanistan and has been instrumental in the search of al Qaeda cells on their side of the border. (Washington Post: Up to 30,000 Feared Dead in Asian Quake).
