

Sony Handycam DCR-DVD403

This Sony Handycam looks like any normal MiniDV camera; the only difference is that it records directly on to a DVD. Superior video quality, a 5.1 surround sound recording and amazing still photography capabilities make this a very good buy. As is typical for Sony camcorders, most functions are accessed via menus on the LCD touch screen. The menu is programmable, so you can put your most-used functions on the first screen. For casual shooters, there is an "Easy mode" that puts the camera in a fully automatic mode. All you need is a rewritable DVD, and you're ready to go and shoot your first DVD film. The camcorder's Rs 50,000 (approx) price tag seems affordable for all the jazz!

über Cool

Here's a look at the latest gizmos—*droolmaal* that's out of your reach. But, it never hurts to know!

Krell HEAT

If you thought Bose made the most expensive home theatre systems you need to refine your search criteria. Krell, a home theatre manufacturer from Louisiana, US, is known for their super-expensive high-fidelity equipment. The latest from their stable is HEAT or the High End Audio Theatre. The set of 16 speakers contains 2 tower speakers, 7 amplifiers, a center speaker, 4 surround speakers and 2 sub woofers. If its watts that you're looking out for, then hold your breath, the output is an earth shattering 11,500 watts! Now comes the hard part. The Krell HEAT would set you back by around Rs 1.5 crore. Talk about home theatre systems costing more than your house. Time to turn on the HEAT!

Alienware Aurora ALX

Every self-respecting gamer knows that apart from the specs of his beefy machine, the looks also count. Most would go in for a special gaming case to hood their system, but there are those who would just pick up an Alienware.

This computer manufacturer specialises in high-end, nay, extreme desktops and laptops. Take a look at the Alienware Aurora ALX, this machine is powered by an AMD 64 processor, 1 GB RAM, dual nVidia GeForce 6800 GT 256 MB DDR3 graphics cards, a Creative Sound Blaster Audigy 2 ZS 7.1 audio card that supports HD Audio.

In addition, the system also has a 250 GB hard disk. Alienware also offers to customise your system. And just so that you don't hear the sound of the system fans Alienware did away with them altogether and instead opted for liquid cooling. Just for the record the Aurora costs around \$4,500—roughly Rs 2 lakhs.
