

Touch&Glide

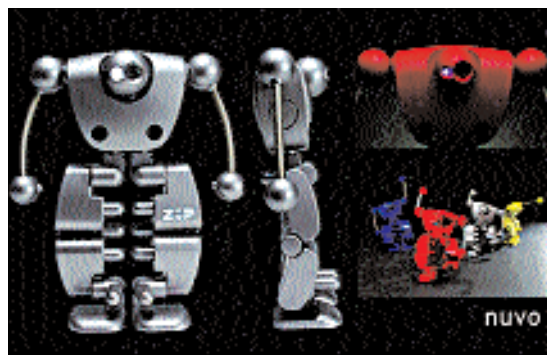

The following product isn't exactly what you'd call a gadget. At least, it isn't something any geek would drool over. Still, the Oliso-Touch&Go is an iron with a difference, or rather an iron that can carry

its own weight. It's one smart iron that won't let you burn your shirts even if you leave it switched on and unattended. The Touch&Glide has a sensor in the handle that can sense whether it is being held or not. The moment you leave it unattended, two heat resistant plastic stilts extend and lift the iron over an inch clear off the cloth. If you want to get back to ironing just grab the handle and it drops back on to the cloth. It costs around \$130 (Rs 6,000 approx).

Sony KDE-P61MRX1

The Sony KDE-P61MRX1 is sure to rivet your attention. Take the sheer sheer size of this Plasma Panel TV—at 61", it is one of the largest televisions available today. This high-end marvel is integrated with all the latest media features. These include a Memory Stick recording device, a PC input so that you can watch the latest Internet TV episodes on your widescreen at a resolution of 1365 x 768. And of course, it is HD-TV enabled. The sound department is well equipped with a Virtual Dolby surround sound and BBE digital sound processing. Of course that size needs adequate support so Sony gives you a choice of either a wall mount or a stand.

Now, you may wonder why would Sony give any accessory as part of the unit? Here's the answer. This flat panel wonder costs £14,000 a piece. Converting it into rupees doesn't quite cut the ice as the price would double with all your taxes and duties. Suffice to say, could buy a Mercedes for the same price.

Nuvo

Is a made-to-order robot the hallmark of a futuristic society? If you think so, then be glad for the future is here. Meet Nuvo, an English speaking humanoid robot for home usage. Designed by the same person who designed the Ferrari Enzo, Nuvo is a formidable piece of technology with four sensors, a dual-microphone, speaker and wireless LAN. It can understand and respond to many different verbal commands and can be controlled via any Web browser. It can walk up and extend its hand when meeting someone, play MP3s on demand. Because these babies are made to order it is sure to burn a hole in your pocket. Drool worthy indeed!
