

## Can you legally Download TV Serials?

**crazybutt**

Analogue Novice

Location: The 5th dimension

I am a Beri Beri Big follower of d Simpsons, I would desperately like to get the episodes. Is it legal?

Let's say you missed a couple of episodes of *Lost* when they were aired. Would it still be legal to download them? You didn't even see them so how would you claim any rights to the content?

As far as I see, recording and keeping copies is perfectly legal—TiVo wouldn't have existed otherwise. But it is the distribution that I think is illegal. Especially since DVDs of entire seasons and recently single episodes for the iPod Video are being retailed, I wonder if there is any way downloading episodes can be legal.

I think its is illegal to download/save using PC (with TV tuner card), even if u have paid ur cablewallah for viewing the serial or movie on TV...

Coz u have paid only to see the serial or movie once i.e when it was aired on the TV at that particular time and not whenever you please.

I feel once you record it LIVE, no one can stop u from distributing it.

I wholly accept there is a hairline difference between legality and illegality such is the case in most questions of law. The exact study of this is called Jurisprudence. No wonder lawyers (like me) interpret it as they want to claim Justice. It is upto the Court to interpret it, which of course would be final.

Every Music channel airs video songs. One can simply record it, save the sound from the file, convert it to MP3 and u have a good MP3 collection of your fav songs—no need to buy or download. Now is this legal? Of course if one shares it then its illegal.

Very important point in all this is that Microsoft is coming out with the Media Center PC. So even if it is illegal to do these things the companies might not want to be in a legal battle with MS who is promoting Media Center PC left and right.

Idea: get a Media Center PC and blame everything on MS :)

## Registry Fast Track?

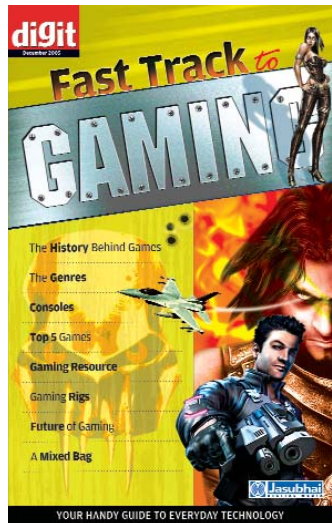

Your Fast Track is "paisa wasool"! Tips & Tricks has made me popular amongst my friends. Why don't you bring out a fast track that gives comprehensive knowledge about Registries?

**Arnab Kumar Mondal**  
Allahabad

Dear Arnab,

I am glad to know that Fast Track is proving to be a good knowledge resource for you. Regarding an entire Fast Track on 'Registries', well, let us see whether there is enough material for it to merit a book. Otherwise, we can definitely carry a series of articles on it.

## More About Mobile Phone Technologies

I have been a keen reader of *Digit* for the past two years, and find it the best computer magazine, enlightening us on the knowledge of science and technology in a very simple way. The most interesting part is the cover story of the month, covering GPS, comparisons of motherboard and cell phones, etc.

It would be great if you were to cover mobile technologies in detail, such as GSM, CDMA, TDMA, 3G, etc. You could also answer questions about the various spectrums, tell us something about WAP, and so on. I feel that your magazine believes in spreading and sharing knowledge, and it does have the potential to change people's lives!

**Hitikant Sahoo**  
Cuttack

Dear Hitikant,

Thanks for your appreciation; it is such words that motivate us to work hard and give you the latest and the best technology news and analysis month after month. Regarding in-depth information about mobile technologies, well, we have been writing about them from time to time in different articles for the last few years. But yes, we could do one big story on it, or even a Fast Track. Thanks for your suggestions—keep them coming!

## In Love Since 7<sup>th</sup> grade

I have been reading *Digit* since I was in the 7<sup>th</sup> grade. Now I am in the 10<sup>th</sup>. *Digit* has convinced me that I should build a career as a software expert. I would like to thank you for inspiring us young readers. It's only due to you that I'm the most tech-savvy person in my class. Your hardware and software tests have helped me and my dad a lot while deciding on what new hardware to buy. My collection of past *Digit* issues and CDs help not only me when I need certain software, but also my friends.

**Amritanshu Kar**  
Delhi

Dear Amritanshu,

Back in 7<sup>th</sup> grade, you were probably one of the youngest readers of *Digit*! It is avid learners like you who will further the fame of our IT industry, and on whose shoulders rests our nation's IT potential. I am glad that *Digit* has been your choice to step up your technology quotient. Keep reading and giving us your feedback as well!

## Philippines Calling

Your mag is one of the few I keep on buying not only in India but also in my country, the Philippines. In that country, where there are many techies, and where software and Internet proliferation is common, I find a big vacuum on Indian Internet hi-ways! Can someone tell me what the official Web site of India is? I asked for help from Mr Genius Yahoo! and the tech-savvy Ms Google, but they can't figure it out. It seems that India, a country I consider an oasis of techies, is left far behind on the Net. Someone told me the Indian site is yet to be launched.

**Noel Arellano**  
The Philippines

Dear Noel,

It makes us feel proud to know we are being read and appreciated as far as in the
