Searchable Index On CD/DVD

I am a regular reader of *Digit* for the last two years, and have all the CDs and DVDs. One day I wanted to locate a specific software—Advanced Notepad. I knew it was on one of the DVDs, but which one? I had to insert all your DVDs and CDs one by one, which was quite frustrating—the whole operation took two hours! Please include a searchable index of the CD and DVD contents, so that we do not have to physically search through our collection—and please don't ignore this letter!

Nitin Kumar
Patna

Dear Nitin,

We do not, and never will, ignore any of our reader's letters! On the point of a searchable index, we certainly are working towards developing a search program that will give you a database of not just the existing, but also of all our past CD/DVD software. This will take some time, but once done, I assure you it will save you lots of time and effort.

Fast Track On PDF?

First off, I would like to congratulate your entire team for the fine work they do for *Digit*. We eagerly wait for the next issue, every time. But I have some suggestions and a complaint.

One, how about dividing each issue into separate areas of IT information? Second, how about putting up PDF versions of Fast Track on your special issue DVD or even a separate CD? Now for my complaint: my copy of the November issue came with cracked CD/DVD pack. Please send me an additional pack and tell me what I need to pay.

Sehaj Kang
Hoshiarpur

Dear Sehaj,

We cannot separate our articles merely on the basis of the information they contain, because there are umpteen categories that these articles can be slotted into. Fast Track on PDF... well, we are currently debating on that; maybe once a quarter or every six months we can give you the past issues of our Fast Track on PDF.

And no, you don't need to pay to get your faulty CD/DVD replaced. Just send it back to us

quoting the 16-digit patron code mentioned on the last page of your November issue, and we will replace it for free. It should take less than two weeks to reach you.

Faulty DVD

I'm a regular newsstand reader of *Digit* for the last four years. I think there's something going wrong with your DVD. For the last three years I have never received a faulty CD, but I did get a faulty DVD five or six months ago. I've again received a faulty CD this month. Could you do something about this? Also, in terms of content, your DVD has more demo games and Linux software than regular software. Please give us more of system software, multimedia and system essential software, since not many of us use Linux or have the latest configuration to play intensive games.

Shatrughan Prasad
New Delhi

Dear Shatrughan,

Regarding faulty DVDs, yes, we are taking definite steps to ensure this doesn't happen. There have been a few cases when our DVDs have either got damaged in transit or have been stolen en route. We have since laid down stringent measures to track the culprits and also to further improve upon our transportation means. Still, if you do get a faulty CD or DVD, please feel free to return them, quoting the 16-digit patron code on the last page of that month's copy of *Digit*, and ask for a free replacement from our customer service help desk.

Coming back to your request for more software, we always need to balance increasing demands for game demos, Linux software and system software. Satisfying everyone does become a difficult task. But yes, we will bear your request in mind.

Games Companies Play

Let me congratulate your team on their superior performance! I'd like to share some issues with you.

☐ I installed the *Serious Sam 2* demo on my Compaq PC with Intel Northwood 2.4 GHz, 1 GB RAM, DVD-Writer, GeForce 4 MX etc. But the demo didn't work. The readme file recommends GF 5900 and even GF 7800 for optimal performance! I tried out the demo on my friend's PC (GF 6600), and frankly, even two year old games like *Unreal Tournament 2003* or *Painkiller* easily rank ahead in terms of graphical quality. What is more surprising that my GF 4 MX (highly overclocked) can play *UT 2003*, *Painkiller*, and *Call of Duty 2* (on the latest Digit DVD) at 1280 x 1024 with 4X AA very easily.

We might have a lot of firepower today, but are we getting enough productivity in return? Especially considering the 1 lakh+ cost of high-end PC, which soon turns out to be obsolete?

☐ I really liked the article on modding the PC cabinet. Many of us have never handled such high-speed tools and expensive lights, fans etc., so a detailed guide from *Digit* is highly welcome. ☐ One more suggestion is, people at *Digit* always play with the latest gizmos, and we're excited too. Why don't you give a live video (on the DVD) about the actual testing procedure, installation, etc. done at your Test Centre? You could also give demo recordings of the games you test for your readers.

I hope the *Digit* team is listening!

Bhavesh N Momaya
Jalgaon

Dear Bhavesh,

Serious Sam 2 is one of the latest games, and requires a DX9.0c-capable card. The review of the game in the same month pointed out that this game *does not* have *Doom 3*-like graphics, and is known for funny-looking characters and bosses.

Some card vendors have had problems with DirectX and OpenGL games, but all that is slowly being resolved.

As for the videos, we have planned this, and you should see it happen in the next few months.
