

The Geneva Sound System redefines home entertainment with its refreshing design and singular audio output

Passionate about music? Here's a sound system that not only packs in powerful audio, but is eye-candy as well! Enclosed in a single, stunning piano lacquered wooden cabinet, the Geneva Sound System uses advanced, patented algorithms to digitally adapt the left and right sound signals to ensure a balanced sound output, regardless of where you are in the room.

The system is available in two models and in three colours—white, black and red. Model L measures 17x11.1x15 inches and produces 100 watt RMS, while model XL measures 21.7x23.5x15.8 inches and generates a thumping 600 watt RMS. Each unit features an iPod Universal Dock connector, a built-in slot-loading CD, and an FM radio—all controllable by remote. You can plug in your iPod Video, iPod Photo, iPod Mini or iPod

nano to its integrated universal dock.

The Geneva Sound System can also work with any other type of audio input including the computer, TV, game console, turntable, and more, through its line-in port. An LED display shows the source and the currently playing track.

Sleek and contemporary, the Geneva Sound System actually lives up to its tagline—*Passion and Simplicity!* Priced at \$599 for model L and \$1075 for model XL, these beauties are available for pre-order at the manufacturer's web site.
