Rules and Regulations

Readers are requested to send in their answers by the 15th of the month of publication.

Employees of Jasubhai Digital Media and their relatives are not permitted to participate.

Readers are encouraged to send their replies by e-mail. Jasubhai Digital Media will not entertain any unsolicited communication.

Jasubhai Digital Media is not responsible for any damage to your system that may be caused while you are trying to solve the problem.

To change the background and foreground colour of the text in the command prompt

To change colours in the command prompt

Open the Registry Editor. Navigate to HKEY_CURRENT_USER\Software\Microsoft\Command Processor. Locate the DWORD value "DefaultColor". If it does not exist, create the value.

In the right pane, modify the "DefaultColor" value, putting in a hexadecimal number, say "82". The first digit of this value determines the background colour, and the second digit determines the foreground colour of the text. In this case, "8" corresponds to grey, and "2" corresponds to green. The result is a command prompt window with green text on a grey background. Similarly, the value "1E" would yield yellow text on a blue background.

Here is a table that shows what hexadecimal value corresponds to what colour:

Hex Value	Colour
0	Black
1	Blue
2	Green
3	Aqua
4	Red
5	Purple
6	Yellow
7	White
8	Gray
9	Light Blue
A	Light Green
B	Light Aqua
C	Light Red
D	Light Purple
E	Light Yellow
F	Bright White

Command Processor. Locate the DWORD values "CompletionChar" and "PathCompletionChar"; if they do not exist, create them.

"CompletionChar" is for autocomplete of file names and "PathCompletionChar" is for autocomplete of folder names. Modify each of the above values to "6". The value "6" corresponds to [Ctrl] + [F], which is what we wish to set it to.

Next, navigate to HKEY_LOCAL_MACHINE\Soft

```
C:\WINDOWS\system32\cmd.exe
Microsoft Windows XP [Version 5.1.2600]

```

The command prompt with green text on a grey background

ware\Microsoft\Command Processor, locate the exact same values as above and make the same change. Finally, exit the Registry Editor.

All changes will be visible when you open the command prompt the next time; there is no need to restart Windows.

Disclaimer: Modifying the Windows registry may cause serious problems that may even require you to re-install Windows. Hence, you should use the Registry Editor with extreme caution. While editing the Registry, there is no way to undo any changes you make! ☒
