

AGP Cards - Mid-Range

Gainward GeForce FX 5900XT 128 MB

Specs: nVidia GeForce FX 5900XT, 128 MB DDR Memory, Pseudo 8 Pixel Pipelines, 420 MHz Core Speed, 700 MHz Memory Speed, DirectX 9 and OpenGL 1.5 Compliant, AGP 8X, Dual-Monitor Support, TV-Out

Our Verdict: This card has the core and memory overclocked so you get the highest performance possible at its specifications. The DVI connector means that a

digital display can be connected to this card.

In our gaming tests, this card gave more than acceptable frame rates at high resolutions and high settings. The performance is more than satisfying and it gives you more bang for your buck.

Runner-Up: None

AGP Cards - High-End

Gainward GeForce 6800GT 256 MB

Specs: nVidia GeForce 6800GT, 256 MB GDDR3 Memory, 16 Pixel Pipelines, 350 MHz Core Speed, 1000 MHz Memory Speed, DirectX 9 and OpenGL 1.5 Compliant, AGP 8X, Dual-Monitor Support, TV-Out

Our Verdict: The Gainward GeForce 6800GT 256 MB is the big daddy of all the AGP cards we'd tested. Its unique dual-fan heat sink is designed to provide extra cooling to the 6800GT core.

The card churned out frames at blinding speeds in resource-hungry games

such as Doom 3 and applications such as 3DMark

at the highest of resolutions with all settings cranked up to the max. It is priced very high, but for those with a real passion for gaming, price never does matter.

Those insane frame rates at the highest resolutions ensure this card is our Zero1 Award winner!

Runner-Up: PowerColor Radeon X800 Pro

PCI Express Graphic Cards - Low-End

Gainward GeForce 6200 256 MB

Specs: nVidia GeForce 6200, 256 MB TurboCache, DirectX 9.0c Compliant, DVI Connector, S-Video out

Our Verdict: The Gainward GeForce 6200 256 MB graphics card is targeted at the budget segment of the graphics market, and it gives you access to high-end features that you generally see only on higher-version models. It features Shader Model 3.0 and OpenGL 2.0, which means you can play every current game on this

card, albeit at lower resolutions. The card performed pretty well in our game and synthetic benchmark tests, and the price is just right.

Runner-Up: PowerColor X300 256 MB

PCI Express Graphic Cards - Mid-Range

XFX GeForce 6600GT 256 MB

Specs: nVidia GeForce 6600GT, 256 MB GDDR3, DirectX 9.0c Compliant, Dual DVI connectors, S-Video Out

Our Verdict: The XFX GeForce 6600GT, which is based on nVidia's GeForce 6600GT chipset, features 256 MB of fast GDDR3 memory at 1 GHz. It supports Shader Model 3.0 and OpenGL 2.0, so all current games should be playable on this card at a fluid pace even at high resolutions. The 6600GT posted the highest fps

scores in its category in games such as Doom 3 and FarCry, and it also scored the highest 3DMark points.

This card is priced a bit on the high side for the mid-range segment, but its superb performance more than makes up for that.

Runner-Up: XFX GeForce 6600GT 128 MB
