

Ultra-Portable Notebooks**Fujitsu LifeBook S2020**

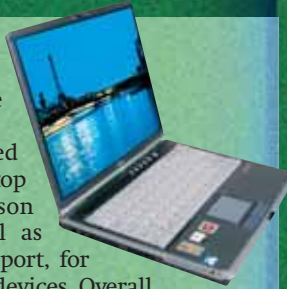

Specs: Athlon XP-M 2100+, 256 MB RAM, ATI IGP 320M, 13.3-inch LCD, 40 GB Hard Drive, Combo Drive, 802.11b+g, 10/100 Mbps LAN

Our Verdict: The S2020 is a good looker, with its small form factor and polished styling. The integrated graphics provide for some moderate amount of gaming. Despite being an ultra-portable, it scored decently

well in most of our performance benchmarks.

This happened to be the only laptop in our comparison test with a serial as well as a parallel port, for support of legacy devices. Overall, a good, affordable ultra-portable.

Runner-Up: Dell Latitude D410

**LIFESTYLE NOTEBOOKS****Workhorse Notebooks****Acer Ferrari 4002**

Specs: AMD Turion 64 ML-30, 512 MB DDR 333 RAM, 15.4-inch Widescreen LCD, 80 GB Hard Drive, DVD-RAM drive, ATI X700 PCIe 128 MB Graphics

Our Verdict: The Acer Ferrari has the ultimate in flaunt value. It is literally crammed with features. The DVD-Writer happens to be a multi-writer: it can even read and write DVD-RAMs, which is a type of DVD good for applications such as video capturing because data can be directly edited on the DVD.

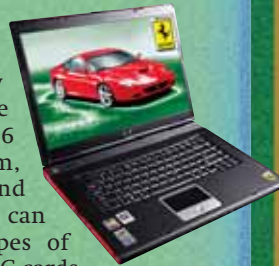

The 15.4-inch widescreen display powered by the PCIe ATI X700 is sure to delight, whether you're a gamer or a movie buff. And if that weren't enough, there's even a DVI connector to connect

an external digital display. Connectivity options include Gigabit LAN, a 56 Kbps modem, infrared, and Bluetooth. The 4002 can also read most types of memory cards and PC cards.

Whatever was thrown at it—games, real-world or synthetic benchmarks—this laptop returned solid performance. A cool bundled accessory is a Bluetooth mouse with the Ferrari logo similar to the one on the notebook.

Now here's something that doesn't just look good—it's got plenty on the inside as well!

Runner-Up: Fujitsu LifeBook LBN3510

**Ultra-Portable Notebooks****Sony VAIO VGN-S46/GP**

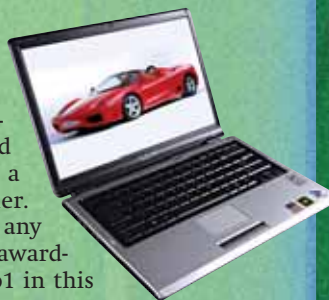

Specs: Intel Pentium M 1733 MHz, 512 MB RAM, 13.3-inch widescreen LCD, 60 GB Hard Drive, Dual-layer DVD-Writer

Our Verdict: This VAIO has the elegance of a Porsche and the ruggedness of a Mustang! The 13.3-inch widescreen display is the best in its class, with unmatched picture quality and very large viewing angles.

The nVidia GeForce Go 6200 PCIe card means decent gaming capabilities. The

VGN-S46/GP performed very well in all our benchmarks and emerged as a top performer. We don't have any doubts about awarding it the Zero1 in this category.

Runner-Up: Acer TravelMate 3002WTCi and Fujitsu LifeBook LBS6240

**Palm LifeDrive Mobile Manager**

The LifeDrive is one of those rare handheld devices to exclude cell phone features. However, it does have excellent features, so you won't mind carrying two devices in your pocket. The LifeDrive is powered by a 416 MHz Intel XScale processor, 64 MB of RAM and a 4 GB hard disk (a micro drive) running Palm OS 5.4 Garnet.

Sporting a 320 x 480 TFT LCD touchscreen, the device is sleek. The gorgeous 65k screen is a god sent for the eyes and the image quality is extremely crisp and clear. The four buttons under the screen are for music, photos, home menu and file browser, apart

from a 4-way navigation key with a centre button.

In terms of connectivity the LifeDrive has it all—Wi-Fi, Bluetooth, USB 2.0, no infrared though but you won't miss it. It is a brilliant organiser and portable entertainment centre which will make your life synchronised. This pocket PDA is worth the buy, though, of course, if it's only a PDA you're looking for.
