Nokia 9500 Communicator

Specs: 65K Colour TFT, Tri-band GSM, GPRS, EDGE, Wi-Fi (802.11b), Bluetooth, Infrared, VGA Camera

Our Verdict: The 9500 Communicator's 65K colour display is nice, crisp, and perfectly legible even in outdoor lighting. The screen is horizontally oriented, and is perfect for reading documents and browsing the Net. A sufficiently spacious QWERTY keyboard makes data entry a breeze. The 9500 Communicator features a full QWERTY keyboard, and includes a word processor and spread-

sheet and presentation applications.

The device fares well on several fronts—contact management, calendaring, and e-mail management features. The Communicator 9500 offers features even the most choosy business executive would be pleased with. It lives up to its name, sporting the ultimate in connectivity options—even offering a proprietary Pop-Port for USB connection with a PC. All this makes the 9500 Communicator an ideal device on a business trip.

Runner-Up: **O2 XDA II Mini**

PRINTERS

Home Inkjet Printers

Canon Pixma iP 1000

Specs: 4800 x 1200 Interpolated Printing Resolution, 150-Sheet Input Tray Capacity

Our Verdict: The Canon Pixma iP 1000 is quite a performer. This lightweight device is capable of printing at interpolated resolutions as high as 4800 x 1200. When it comes to print speeds, the iP 1000 is faster than any other in its category. In fact, in our tests, it excelled in printing every type of document. It printed the highest number of pages in the drain test, where we print documents until all the ink from the

cartridge is drained. This, along with the lowest cartridge price, meant this printer has the lowest ink consumption per printed page.

Print quality, too, is better than that of the others in its category—and the price, surprisingly, is also amongst the lowest. With everything going for it, the Pixma iP 1000 had to win the Digit Zero1 Award in this category.

Runner-Up: **HP DeskJet 3745**

Office/Photo Inkjet Printers

Canon Pixma iP 3000

Specs: 4800 x 1200 Interpolated Printing Resolution, PictBridge-Ready, Dual Paper Feed (Total Capacity 300 Sheets)

Our Verdict: This photo printer is really fast even at the default settings, making it ideal for office use. The dual-feed paper tray means paper can be fed from the top and the bottom. It also supports duplex printing, as well as CD/DVD face printing.

The iP 3000 uses the CMYK system employing four cartridges, to enhance

print quality without compromising on speed. PictBridge facilitates connecting directly to PictBridge-ready cameras, so you can print photos without an intervening PC.

This printer was the best in its category in terms of print speed and quality, while also being one of the lower-priced ones. The Canon Pixma iP 3000 is, overall, the best office inkjet printer available in its class.

Runner-Up: **Canon Pixma iP 4000**

Showstoppers!

Sony PlayStation Portable

The glossy black exterior and the large display sporting 16.77 million colours are what first strike you when you get your hands on the Sony PSP. The package bundles quality PSP earphones, a 32 MB MS duo pro card, the AC adaptor, and the PSP battery pack—apart from the case, hand strap and user manual.

Communication interfaces include USB, infrared and Wi-Fi—yes, it has 802.11b wireless integrated, which lets you play multiplayer games with another PSP! The unit is powered by a replaceable 1800 mAh Li-ion battery, which can

be recharged using the bundled AC adaptor.

The PSP is somewhat bulky for a pocket, measuring 17 x 7.4 x 2.3 cm. It can play MPEG-4 movies and MP3 songs apart from the gaming action it's meant for. The gaming experience is amazing, as the PSP feels perfectly well-balanced when held in both hands; the graphics quality is so outstanding you can even see the reflection of a bridge and trees on the roof of a car! The 4.3-inch 16:9 TFT LCD screen provides you with a wholesome gaming experience.
