

Monitor Placement

As shown in the figure, the monitor needs to be placed lower than the line of sight. The top of the viewable area should be at least 15 degrees below the line of sight and the bottom of the monitor's viewable area should be no more than 50 degrees below the line of sight.

flow to your back and buttocks, and ensures that you do not suffer from RSI. You should try not to slouch in your chair, and take short breaks by standing up and walking about to help the blood circulate. Stretching, more so, after a long stint of sitting, is a beneficial practice.

Monitor Placement And Lighting

Lighting? Yes, even lighting is a factor when deciding monitor placement. You'll often see someone at your workplace twisting and contorting when trying to read a particular area of their monitor. So also, you may place your monitor in an equally awkward position, just to be able to view it properly.

When deciding where to place a monitor, it's best to make sure there's no light source behind the user, as this causes a glare on the screen and makes areas of the screen unreadable. Also, in larger offices where the workforce is seated in cubicles, rows and columns, such as in a call centre, diffused lighting is a good idea. This cuts out the one bright source of light and reduces the glare on the monitors.

The second most important aspect is the distance of the screen from the eyes. The closer the screen, the more the strain on the eyes. This is easily demonstrated by doing a simple test: hold up your index finger at a full arm's length from your face. Now focus on your nail and gradually bring your finger closer to your eyes. You'll notice that the closer the finger gets to your eyes, the more strain you'll feel while focussing.

So what is the correct distance at which your monitor should be placed? The answer is more complicated and involves more than a simple measurement in inches. Though it is widely suggested that you place the monitor at least two feet away from the eyes, this doesn't account for the other variables you come across when dealing with computer monitors.

For instance, placing a 14-inch monitor two feet away from your eyes is good, but what about those with 19 or 21-inch monitors? Then there's

**This
could be
you!**

Pick up the basics of IT. Or learn the most advanced of courses in networking and internet security. And get launched into a most happening career that is guaranteed to take you places.

Rooman Technologies can make it all happen with complete ease. With the best of faculty, state-of-the-art facilities to help your learning process in a highly professional manner.

Come, join the best today ... To be the best tomorrow.

HARDWARE & NETWORK TRAINING

Courses Offered

- COMPTIA-(A+, N+), Security+, Server+
- MICROSOFT-(MCSA, MCSE) • RED HAT - (RHCE, RHCT)
- CISCO - (CCNA, CCNP)
- CHECK POINT-(CCSA, CCSE, CCSE+) • ISS-(ISS-CS, ISS-CE)
- EC-COUNCIL-CERTIFIED ETHICAL HACKER (CEH)

CEH (CERTIFIED ETHICAL HACKER)

- | | |
|-------------------------------|--------------------------|
| • Scanning & Footprinting | • Linux Hacking |
| • System Hacking | • Novel Hacking |
| • Writing Trojans And Viruses | • Penetration Testing |
| • Man In The Middle Attack | • Cryptography |
| • Session Hijacking | • Hacking Webserver |
| • Physical Security | • SQL Server Hacking |
| • Hacking Wireless Network | • Evading IDS & Firewall |
