Advancements in technology have made life much easier for all of us, but how much do we realise it?

Robert Sovereign-Smith

Twenty years, or perhaps even just a decade ago, life was a lot tougher! Depending on when you were born, you may or may not appreciate that fact. And the fact is, it's technology—not politics or the economy or anything else—that's made most of the difference.

Let's say you have to type a letter, or a résumé; you start the computer, open MS Word, type it out, format it with colours and fonts and then press [Ctrl] + [P]. Simple, isn't it? Now, consider how your father would have done the same task when he was your age: he'd pick up a huge, heavy typewriter (if he had one), find paper, load it in, hammer away at the keys—carefully, as he didn't have a Backspace or a Delete button, and use whiteout to

cover his mistakes, and finally one copy would be ready. What if he'd needed to type something in triplicate? If he lived in the age of the photocopier, he'd have been able to go to a shop and make a few copies; if he didn't, he'd have had to type out the same letter all over again. All you need to do is change the "Number of copies" option in the print dialog box to "3"!

This, however, is something you already know, so why is *Digit* reminding you? Well, we want to look at what inventions and technological developments have truly enriched our lives, and what upcoming
