Slipstream Service Pack 2 Into An Original Office 2003 CD

A. Creating An Administrative Installation Point

We'll first need to create an Administrative Installation Point so we can slipstream the updates into the Office 2003 CD (you cannot just do a direct copy from CD to hard disk and hope that it will work—it won't!). This only has to be done once, and updates can still be slipstreamed to an existing Administrative Installation Point at a later date.

Insert your Office 2003 CD and run the following command (assuming E: is your CD drive letter):

```
E:\Setup.exe /a
```

This starts the Office 2003 setup, where you can define an Administrative Installation Point for your Office 2003 files. From here, you can fill in the Organization Name and your Product Key (this is also the last time you'll ever need to insert your Office 2003 Product key!).

Set the Install Location to C:\Office2003\ (create the folder beforehand if you haven't done so already).

After clicking 'Next', accept the EULA, and installation will start. Since we executed Setup with the "/a" switch, it will only copy files to the Install Location you specified to create an Administrative Installation Point, not install Office on the system.

Once you're finished, click 'OK'. Your Office 2003 files should all be in the folder specified during setup.

B. The Slipstreaming Process

Explore your Service Pack 2 CD. If it contains (mainly) six files—namely, mainsp2ff.msp, ohotfix.exe, ohotfix.ini, ohotfixr.dll, owc11sp2ff.msp, and owc102003sp2ff.msp—then simply copy and paste all the files to 'C:\SP2'.

If you have a Service Pack 2 CD with only one file, or if you want to use Service Pack 2 from the December 2005 Digit DVD, then you'll need to extract the files: copy and paste 'office2003SP2-KB887616-FullFile-ENU.exe' from the CD/DVD to 'C:\SP2'. Then, run the following on the above file at a command prompt in the SP2 folder:

```
Office2003SP2-KB887616-FullFile-ENU.exe /Q /C /T:C:\SP2
```

This will extract the Office 2003 SP2 files to 'C:\SP2'.

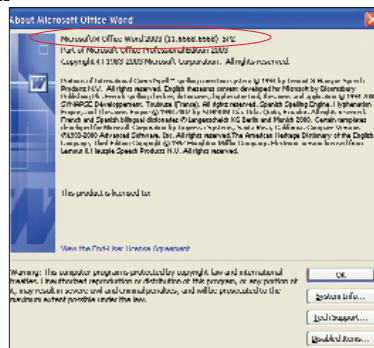

There is another very simple method to extract this file if you have WinRAR: right-click the Office 2003 SP2 file and select "extract files," then select the destination path as 'C:\SP2'.

We've extracted the SP2

file to 'C:\SP2'. We now integrate this extracted file with Office 2003. Run both these commands in a command prompt:

```
msiexec /p C:\SP2\MAINSP2ff.msp /a C:\Office2003\PRO11.msi SHORTFILENAME=TRUE /qb
```

```
msiexec /p C:\SP2\OWC11SP2ff.msp /a C:\Office2003\OWC11.MSI SHORTFILENAME=TRUE /qb
```

(If you have 'STD11.msi' instead of 'PRO11.msi' in the Office2003 folder, edit the msiexec syntax accordingly.)

When this is done, the Service Pack has been slipstreamed into your Office 2003 Administrative Installation Point. You can now delete the 'C:\SP2' folder. When that's done, you have a fully up-to-date Office 2003 distribution. At this stage, you can choose to burn the contents of 'C:\Office2003' to a CD-R. ☑
