Pick, Choose, Publish!

For the publishing needs of your small enterprise, MS Publisher could just be the sweet trade-off between MS Word and 'professional' software

Nimish Chandiramani

The trials and tribulations of setting up your own enterprise are many. Even after the actual establishment, there remain niggling issues. Information needs to be spread, customers need to be brought in, and you still need to decide

on your corporate identity—visiting cards, letterheads—the list is long.

To get the professional look you desire for your promotional material, you would normally turn to high-end (read expensive) software such as Quark XPress or Adobe InDesign. You would then need to spend long hours learning how to use the software, and some more long hours designing your publication. And if you need quick results, you might even need to hire a professional. Oh, the financial horror!

Thrifty businesspeople, though, would use Microsoft Word to publish their material. It's taken for granted that every new PC comes with Word, and it even offers a few respectable features that can help you design your publication. However, as the
