

## XFX XGear PC Wireless Controller

We managed to lay our hands on XFX's soon-to-be-launched XGear PC Wireless controller, so we could give you a sneak preview!

This ergonomically designed wireless gadget fits the hands perfectly, and the scratch-free rubber handles make for easy grip. The controller feels nicely balanced in your hands while playing—a welcome feature in those tricky situations when you're fighting to save your life. The RF receiver plugs into a USB port, and the controller can be used within a distance of 30 feet from your PC.

Two reflex motors in the controller translate signals from games into actual vibrations to simulate impact. A switch at the bottom lets you choose between low and high intensity levels for the vibrations.

A macro button on the controller lets you assign

up to a 30-step button sequence to four different buttons. This is useful when you want to execute complex manoeuvres in strategy or third-person shooter games with the help of a single button press. Other special functions of the controller include a turbo button for rapid firing, and assignment of keyboard or mouse keys to the controller using the driver.

The wireless controller uses 4 AA batteries, and goes into sleep mode to conserve power when no key is pressed for five minutes. This is a must-have accessory for serious gamers—watch out for the launch!

## Nokia N70

### Multimedia To The Max!

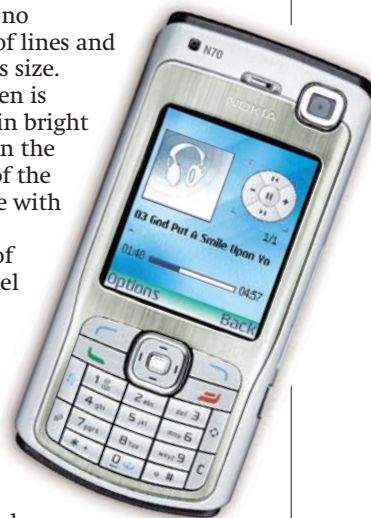

The classy N70 is the latest phone from Nokia.

Weighing 126 grams, the N70 is no featherweight; however, clever use of lines and curves helps in masking the phone's size.

The 176 x 208, 262 K colour screen is gorgeous and remains legible even in bright outdoor settings. The large screen on the N70, however, has limited the size of the keypad, which was our biggest gripe with this phone.

The N70 has an extensive list of features that includes a 2-megapixel camera for stills and video, a 0.3-megapixel camera for videoconferencing, a music player capable of playing most audio formats, and FM radio. Audio playback was great, and the FM reception splendid. The camera does a good job in most lighting conditions; however, you'll need to be extra careful about camera shake with this phone.

The battery lasts around two and a half days with normal use. Bundled with the phone are a 64 MB RS-MMC card and a hands-free earpiece. The phone retails at Rs 27,919.

## Lenovo ThinkPad Z60t

### The Fast And The Strong

The first ThinkPads to feature widescreen LCDs, the Z series from Lenovo moves away from their strictly business styling for notebooks. The Z60t is a thin and light model in the range, and weighs a little less than 2 kg. Featuring a 14-inch widescreen LCD, the Z60t comes with an option of covers—black or titanium. The titanium special-edition cover provides added durability and a scratch-resistant finish.

Powered by an Intel Pentium M 760J processor running at 2 GHz on a 915GM chipset and complemented by 512MB of DDR2 memory, the Z60t runs most standard applications with ease.

An 80 GB 5400 rpm SATA hard drive provides ample storage space. Other features include an integrated DVD-RAM drive, keyboard light and SD card reader. Connectivity options include gigabit LAN, a 56K modem, Wi-Fi, Infrared and Bluetooth. Available ports include 3 x USB, FireWire, PC card slot, VGA, S-Video and audio jacks.

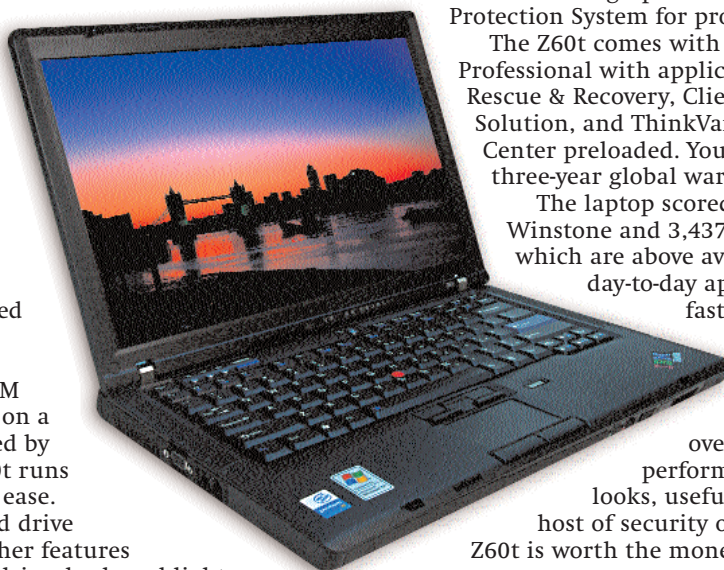

The full-sized keyboard features new multimedia keys, along with touchpad and pointing stick options for pointer control. Security and protection features include

a biometric fingerprint reader and Active Protection System for protecting data.

The Z60t comes with Windows XP Professional with applications such as Rescue & Recovery, Client Security Solution, and ThinkVantage Productivity Center preloaded. You also receive a three-year global warranty.

The laptop scored 21.3 in Business Winstone and 3,437 in PCMark 2004, which are above average; this means day-to-day applications will run faster. Battery life is over two hours with DVD playback.

This laptop is, overall, a very decent performer: with great looks, useful features and a host of security options, the Lenovo Z60t is worth the money.
