

AutoFormat A Table

 You can quickly format a table by using the Table AutoFormat command. The Table AutoFormat command will automatically resize your table to fit the largest entry and apply predefined borders and

Use TableAutoFormat to format a table using one of many styles

shading. To format a table by using Table AutoFormat, place the insertion point in the table to be formatted. Choose **Table > Table AutoFormat**. Select one of the predefined formats. Observe the preview window. As you select different formats, a representation of the format is displayed in the Preview area. Click 'OK' to apply the format to the table containing the insertion point.

Bet You Didn't Know

Multiple Selection

With Word 2002, users can now use a feature that's been in Excel for a long time: multiple selection. This allows you to select multiple areas of text in a document simultaneously, so that you can then apply styles and formatting all at once. This feature is typically enabled by selecting some text and then using [Ctrl] to select other blocks of text, which is similar to the way you'd select multiple icons in Windows Explorer. One useful feature of multiple selection is that you can do searches within the area that are highlighted, excluding the unselected portions of the document.

Sorting Data In A Table

 To sort data in a table, first make sure the header row is unique looking from the rest of the data (bold, italicised or larger). Put the mouse anywhere in the table. Choose **Table > Sort**. In the

Did you know you could automatically sort data in a Word? After selecting to sort data, you're presented with various Sort Options

'Sort By' drop-down list box, select the field name by which you want to sort. In the 'Type' drop-down list box, select 'Text', 'Number' or 'Date' according to the contents of the column selected in the 'Sort By' box. Select 'Ascending' or 'Descending' and click OK.

Comparing Documents

 Comparing documents is useful to view changes to a document that was not revised by using change tracking. Go to **Tools > Compare and Merge Documents**. Open the document you want to compare the current document with. Click the arrow next to 'Merge', and then do one of the following:

1. To display the results of the comparison in the original document, click 'Merge'.

When you want to merge documents, you're presented with a menu under 'Merge'. Try out all three of them!

2. To display results in the currently open document, click 'Merge into current document'.

3. To display the results in a new document, click 'Merge into new document'.

When you compare documents, Word marks text

window by opening that version from **File > Versions**. You can also open, print, and delete earlier versions.

Reviewing Comments

 ☒ View the comments of a single reviewer: Click **Show > Reviewers** on the Reviewing toolbar, and select the Reviewer the comments from whom you want to see.

☒ Locate a specific comment: Click 'Go To' on the Edit menu. In the 'Go to what' box, click 'Comment'. In the 'Enter reviewer's name' box, click the reviewer's name. Click 'Next' until you find the comment you want.

☒ Review one change at a time: Click 'Next Change' or 'Previous Change' on the Reviewing toolbar.

☒ Accept the change: Click 'Accept Change' on the Reviewing toolbar.

☒ Reject the change: Click 'Reject Change' on the Reviewing toolbar.

☒ Accept all changes in one pass: In the drop-down next to 'Accept Change', select 'Accept all changes in document'.

☒ Reject all changes in one pass: In the drop-down next to 'Reject Change', select 'Reject all changes in document'.

(In the above two drop-downs, there are other options you can explore and experiment with.)

What Is A Table Of Contents?

 A table of contents is a list of headings in a document that you can insert in a specific location. You can use a table of contents to get an overview of the topics discussed in a document or to quickly navigate to a topic.

You can create a table of contents for a document that you plan to print as well as view in Word. For example, when you display the document in print layout view, the table of contents includes page numbers along with the headings. When you switch to Web Layout view, the headings are displayed as hyperlinks so that you can jump directly to a topic.
