

Create A Table Of Contents

 In your document, apply inbuilt heading styles (Heading 1 through Heading 9) to the headings you want

After creating a document using various heading styles, Word can automatically generate a TOC. The format will depend on the type of headings you used

to include in your table of contents. Click where you want to insert the table of contents. On the Insert menu, click **Reference > Index and Tables**, and then click the 'Table of Contents' tab. Do one of the following:

1. To use one of the available designs, click a design in the Formats box.
2. To specify a custom table of contents layout, click 'Options' and choose the options you want.

Apply A Different Style

 To apply a paragraph style, click the paragraph or select the group of paragraphs you want to change. Or to apply a character style, click the word

You can easily apply different styles to your document in one pass using the Styles and Formatting task pane

or select the words you want to change.

On the Format menu, click 'Styles And Formatting...' This will open the Styles and Formatting pane to

the right. Click the style you want to apply.

If the style you want is not listed, select another group of styles in the 'Show' box. A paragraph mark appears to the right of each paragraph style. A bold, underlined letter 'a' appears to the right of

character styles. A table icon appears to the right of each Table style.

Recording A Macro

 Macros are a string of commands that are recorded in order so as to execute them with one keystroke. Many times when users become more

Try out the macro feature and see how much time it saves you!

Bet You Didn't Know

The Format Painter

The Format Painter lets you copy text formats from one location to another. You've probably often seen the Format Painter icon on the toolbar, but never used it! Using it is convenient if you want the same format(s) applied to text in different locations. The Format Painter copies all text formats, including the font, font size, colour, and character effects. The Format Painter saves time and helps create consistent formatting throughout a document. It can also be used to copy paragraph formats, such as alignment settings.

So how do you use it? First, click on the text with the format(s) you wish to copy. Click the Format Painter once if you want to copy formats to one other location, or double-click it if you want to copy to multiple locations. Now select the text at the new location(s) that you want to format. If you double-clicked earlier, the Format Painter will remain active, allowing you to select text at multiple locations. Remember (if you double-clicked) to click the Format Painter button again when you're done to turn it off.

experienced, they want to speed up tasks that they do on a regular basis. By creating a macro, the user can become much more productive, because multiple commands can be executed with one keystroke. Let's look at the process of creating a simple macro in Word that will check the spelling, save the document, and then go into print preview—all with just one keystroke.

Open any document. Click on **Tools > Macro > Record New Macro**. The Macro dialog box opens. In the top of the dialog box is a field that reads 'Macro Name'. Type in the name of your new macro. Next, click on the Keyboard button in the 'Record Macro' dialog box. The 'Customize Keyboard' dialog box opens. Now, click in the area inside the 'Customize Keyboard' dialog box that reads 'Press New Shortcut Key'. The insertion point is placed into that text field. This area is where you assign a keystroke command to your macro.

Press [Alt] + [1]. The command should appear inside the 'Press New Shortcut Key' area, and under it will appear a message indicating if that particular keystroke command is already used. If it is not being used, it should read "Currently Assigned to:

[unassigned]". If it is unassigned, you're OK; if not, change the keystroke to another containing [Alt] + [another number]. Click 'Assign'. The Macro is assigned that particular keystroke.

Click 'Close'. The 'Macro Record' toolbar appears. It doesn't consist of much; you can (without customisation) only pause/continue or stop recording. Now, while the Macro is getting recorded, check spelling in the document until the spell check is finished. Next, save your document. Then, click **File > Print Preview**. Click the Stop button on the 'Macro Record' toolbar. Your macro has been recorded. Now you can test the macro by executing the keystroke assigned by you.

Tab Stop Selection Buttons

 Left Tab—Use this selection to set a left-aligned tab stop.

 Center Tab—Use this selection to set a centered tab (to centre a heading, for example).

 Right Tab—Use this selection to set a right-aligned tab.

 Decimal Tab—Use this selection to set a decimal-aligned tab.

 Bar Tab—This is not a tab stop per se. In paragraphs where a bar tab is
