TV To VCD

Q I bought a Techcom Super TV SSD-TV-670 PCI TV-Tuner card. My problem is that I am unable to write the files onto CD properly in VCD mode. What mode should I use to get the best out of my TV-Tuner card, and what are the best PVR software and video and audio editing software available?

Sagnik Bose

A There's no difference between a regular video file and one you've captured using your card. If you're able to capture video without any problems, you should be able to write the files to CD in VCD mode. You will need to purchase and install a CD-burning software (such as Nero Burning ROM) to do this.

After you start Nero, select the CD format as 'Video CD', select 'PAL', and click OK. Now simply drag and drop the file you captured using your TV-Tuner card into the Nero window. If the file format is not conformant with VCD standards, Nero will prompt you to re-encode the file so it becomes compliant with VCD 2.0 standards. Opt to re-encode the file. This process takes some time, but it produces VCDs that can be played on any VCD player.

Some of the better PVR software are InterVideo WinDVR from www.intervideo.com, Cyberlink PowerVCR from www.cyberlink.com, SageTV from www.sage.tv and ChrisTV from www.chris-tv.com.

Adobe Premiere InterVideo WinProducer and Ulead VideoStudio are some of the many video editing software, and Sony Sound Forge 8.0, Adobe Audition, Cool Edit Pro and GoldWave are some of the good audio editing software available.

An Autopatcher Accident

Q I am using Windows XP with SP2. I've installed Autopatcher XP, which was provided with the last issue of *Digit*. From the time that I've installed it, I'm not getting the usual welcome screen, and during shutdown I see a different interface. When I press [Ctrl] + [Alt] + [Del], a window opens, describing something about shutdown, logging off, etc. I want all these set to the defaults.

Vinayak Vijayan

A This happens because you accidentally checked the box next to 'Disable welcome screen, force classic logon'. To restore the usual welcome screen, start the Group Policy Editor by clicking Start > Run and entering "gpedit.msc". Here, navigate to 'Computer Configuration', expand 'Administrative Templates' and click on 'Logon'. In the right pane, double-click 'Always use classic logon' and set it to 'Not configured'. Exit the Group Policy Editor.

Disable Classic Logon using the Group Policy Editor

845: 266, 333?

Q I have an Intel 845GL motherboard with 128 MB of DDR 266 MHz RAM installed. I've heard that the 845GL can also support DDR 333 MHz RAM with a BIOS upgrade. Is that true?

Manmohan Behera

A The Intel 845 series of motherboards supports DDR 200 and 266 MHz RAM, and does not support DDR 333 MHz RAM even with a BIOS upgrade. You may still be able to use a DDR 333 MHz module on this motherboard, but it will run at a clock speed of DDR 266 MHz.

Download The Drivers!

Q I recently purchased a Nokia 6225 CDMA cell phone with a data cable (DKU 5). I installed PC Suite from Nokia to facilitate data transfer. My problem is, I'm not able to transfer data from my PC to the phone. Do I need to install additional software?

Kavoor Branch

A In order to connect the Nokia 6225 phone with the DKU-5 to a PC, you'll need to download and install the drivers for the DKU-5 cable from www.nokia.com. These drivers must be installed before you connect the phone to the PC. It's only after installing these drivers that Windows will be able to successfully install and configure the cable. Also, download the latest version of Nokia PC Suite from the same Web site.

A 16-Bit Issue

Q I have a few educational CDs from which I'm not able to install the software. When I insert the CDs, I get a message that says, "C:\Windows\System32\Autoexec.NT. The system file is not suitable for running MS DOS and Microsoft windows applications. Choose Close to terminate the application."
