Innovative use of software can help deliver better service, maintain quality levels, and more

Renuka Rane

Located close to Mumbai airport, The Orchid is Asia's first certified eco-friendly five-star hotel. Popularly called an "Ecotel," a term used for environmentally-conscious hotels, The Orchid has received numerous awards for being a pioneer amongst such hotels. It has used technology extensively to further its commitment to the environment, and also to keep a track of all activities on the premises.

The Orchid uses 43 software to maintain extensive digital records and manage processes such as property management, material management, accounts, inventory, and more.

Ideal Material Management

Since it opened in 1997, The Orchid has been using the ShawMan Material Management Software (MMS), a comprehensive program that manages the inflow and outflow of goods, generates regular consumption reports and thereby facilitates supply chain management.

Shailesh Bhagwat, EDP (Electronic Data Processing) manager, of the hotel says, "Whenever there is a requirement for a product—be it a bar of soap or a sofa set—the concerned department makes an entry in the ShawMan MMS. This requisition is authorised on the software by several personnel before it reaches the purchase department."

The Orchid has made innovative use of the ShawMan MMS by assigning ratings to its retailers based on the reports generated by the
