

## Ease Of Use

A wizard guides you through the installation process. The UI might seem cluttered at first, but the functions of the buttons soon become clearer. You shouldn't have a hard time configuring the software to tune in to TV channels and other inputs such as Composite. The configuration options are well-defined.

## Features And Performance

WinDVR is a promising piece of software, considering its feature set. First, the live TV preview was outstanding. The preview didn't show up any pixel grains. Colour reproduction did seem a little dull, but that can be corrected from the colour settings in the configuration options.

WinDVR helps you take a closer look at a channel telecast by a nifty implementation of the zoom feature. This helps you to magnify a selected area with negligible distortion.

If you want to see what's going on on, well, 16 channels simultaneously, then multi-channel preview is what you are looking for. Yes, WinDVR allows you to watch 16 channels at the same time! The quality of channel preview as well as that of video recording were superior as compared to almost all the other software; only PowerVCR was close to the quality of WinDVR.

Because the feature list thus far was impressive, we were a little surprised to see that the recording feature was left uncontrolled—that is, there was no time limiter or disk space limiter option. This means that recording will continue until it's manually stopped—or until the disk space is exhausted!

Other features include DV-to-MPEG conversion and burn-to-disc; these can be used together to record from a camcorder to a disc. Barring the cost of this package, it has all the features and quality to beat the top-rated PowerVCR II.

## WinVDR

No, that wasn't a typo—this is WinVDR we're talking about, not WinDVR. But the similarity in the names doesn't reflect in the quality of WinVDR. We don't really recommend this software.

## Ease Of Use

WinVDR's interface is so mediocre, it should probably be distributed for free! The designers don't seem to have put much thought into designing the user interface. All the configuration options are listed under the 'Options' menu. And almost all the options begin with the letter 'S'; you'll have to strain your eyes to find the option you're looking for. A separate playlist window is provided to list and also play back captured videos.

In WinDVR, a floating vertical snapshot bar lists all the images taken using the snapshot feature

All the configuration options for WinVDR are available under the 'Options' menu
