

d) DownThemAll

Firefox has an inbuilt download manager, but you've probably noticed that there's a bug when you try to resume a download! DownThemAll can be a solution—it can even resume downloads from

DownThemAll showing various active and completed downloads. The speed is indicated on the title of the dialog box

previous Firefox sessions. To get this extension, go to <https://addons.mozilla.org/extension/s/moreinfo.php?id=201&application=firefox>

Clicking on any download link opens the 'Save as' dialog box; you will now also see DownThemAll listed in the dialog box. Choose it and provide a location on your hard disk to which you want to save the file.

e) FoxClocks

Want to know what the time is in Fiji? Just install FoxClocks! This extension shows the time in cities around the world by synchronising with a database of time zones and daylight saving. Head to <https://addons.mozilla.org/extension/s/moreinfo.php?id=1117&application=firefox>

FoxClocks displays a message asking you to choose from 100-odd cities. It then displays the current time at the chosen cities in the

Choose cities for which FoxClocks should display the time

FoxClocks displays time of chosen cities in status bar

status bar. You can even use FoxClock as a toolbar in your browser instead of displaying the times in the status bar.

f) ReminderFox

Using this extension, you can set To-Dos and reminders within the browser. Download and install this extension from <https://addons.mozilla.org/extension/s/moreinfo.php?id=1191&application=firefox>

After installation, you'll notice a

Don't miss any important occasion use ReminderFox

ribbon-like icon in the lower-right corner of the browser.

Right-click on this icon to access your To-Dos and reminders. Right-clicking the icon also gives you all the options you'll need to add items, change settings, and so on.

g) FireFTP

If you regularly browse FTP sites, then you definitely need FireFTP, an FTP client that greatly eases file browsing and copying. You can right-click on an FTP link and then choose to open it with FireFTP. FireFTP opens your machine's file browser

FireFTP interface makes file transfer easy and it can even resume downloads

on the left pane and the FTP site on the right pane of the browser. You can drag and drop files between the two... it's as simple as that! To get the extension, go to

<https://addons.mozilla.org/extension/s/moreinfo.php?id=684&application=firefox>

h) Flashblock

Flash-based ads can be very irritating, and also take up your bandwidth. Some of you may already have thought up a method to block them, but with Firefox, all you need is the Flashblock extension. Use this link to download and install this small extension: <https://addons.mozilla.org/extensions/moreinfo.php?id=433&application=firefox>

The extension will appear whenever it detects and blocks Flash content. The blocked content is replaced with a play button, so you can choose to play Flash-based content such as an e-greeting (or even ads, if you actually like them!).

4 STEP Last but not least—Themes

The default Firefox skin is mediocre, and it's boring to look at the same interface all the time. Add some excitement to your browser... pep it up with good-looking themes! Firefox has made this very

Firefox with a make over using Theme Pimprilla

simple by incorporating a theme downloader-cum-installer. Open the theme section at Mozilla's Web site:

<https://addons.mozilla.org/themes/?application=firefox>

Browse through the numerous themes and click on the download button for the theme you want to download. This will open the Themes dialog box. On applying a downloaded theme, you'll need to close and reopen the browser for the changes to take effect.

At the end of this exercise, you'll have configured a classy and complete browser. You'll honestly be able to say, "Firefox rocks!" ☑
