3Dfile.io - Instant 3D views

Are you working with 3D models? Drop your models or DWG drawings here and get instant 3D views. There's no need to sign-up or add any plugin. <http://www.3dfile.io/>

Work@Tech

to not need shouting out too loud and bold. Check their alumni and their achievements. They expect you to be good enough to score Internships and jobs on their own. Remember, there is no scarcity of jobs, only scarcity of right people for the jobs.

3. Avoid schools which rely a lot on theory. You can get that *anywhere* for almost free. It is so free, you could YouTube all of it. The job of a good Game Design school is to *not* teach you... but provide conditions for you to learn under and at times, even pressure you. There is a lot more the Game Design than Design, there is People management, Project management, Ego management and so much more... All of this will make you ready to work on a live project in a Studio.

Alternatively, you could go head-on and join as a trainee or a Game Tester and work your way up the ladder. That

gives a totally different kind of conditioning & working style. And relies heavily on learning on low risk live projects and proving your metal.

And lastly, you could go lone wolf, where you try to do as many things as you can on your own (with some collaboration) and release games on your own too. This involves a lot of Investment & patience and it will keep you hungry for a while before you hard work starts paying you off. In any case... all three approaches rely heavily on self learning and differ only on the basis of how much time and money can you invest and what you expect out of yourself.

Future Opportunities – Is the sky really the limit?

So it has been a few years since you took a call and you are a Game Designer now. Where do you go from here? Well... 2 things come into play at this stage. The

first is knowing that you will never to stop learning as a Designer. The second is knowing what you want from your career. Did you see yourself making this unique game no one else seems to have made? Go ahead, gather a team, inspire others with your idea and start a studio. Get a prototype running and approach publisher (in the same way a writer would approach one for funding / marketing / development / distribution) to pitch your game to. Even though this stage normally comes in at 3-10 years of work depending on how enterprising you feel, you don't always need to start your own company for your ideas. If the idea is good and you sell it well... your studio could fund and make it. But nothing stops you to do the same either. Good luck! 🍀
