

**Buzz**

Come with us as we give you a tour of drool-worthy products at this year's Computex

**Deactivate inactive accounts**

Yahoo is going on a sort of spring cleaning activity, but instead of removing entire services, it's going to deactivate accounts from 15th July, which are inactive since one year.

✉ Why on earth was the 'Spend Smart' section for laptops and ultrabooks scrapped off? It has always been a handy guide for most of the readers who need to buy components and want to save themselves from surfing through the internet all day.

I noticed that although you guys start off great sections, you do not continue them. Lack of space or content – whatever be the reason – it's a bit frustrating at times when you expect regular features and don't get it, right? I know being a critic is not the way to go, but it is these suggestions from us readers that will help to make our favorite magazine even better.

*Shubbam*

4 The Spend Smart section covers different categories each month, so you will see laptops and ultrabooks next month. Due to space constraints it is not possible to include all categories every month. Regarding the sub-sections, well sometimes we have to allot more pages to certain stories - cover story, comparison tests and so on. But we ensure that you get a variety and we do not completely drop any section.

*Nimish*

✉ This is my first letter to you. First of all I would like to congratulate you on your 12th anniversary.

Talking about the June issue (again read in a train), Fast Track to Embedded Systems was fabulous! Encyclopedia Technica and Intel tutorials were also good. Somehow the cover story wasn't good enough for an anniversary issue. You should have included Fast Track PDFs and some free goodies such as those seeds you'd included in a previous issue. And yeah, you forgot to include 'Digit 101' this month.

Finally, some suggestions:

1. I appreciate your care for the environment. You use recyclable plastic in your packaging. However the vendors don't accept it for recycling. Please think of an alternative such as fabric bags or cardboard boxes like provided in anti-virus packages.
2. Please try do dedicate a section of your DVD to TED Talks every time or provide a DVD full of TED Talks once every few months.

### Feedback for the June 2013 issue of Digit

3. Fast Track to DIYs Part 2, circuit components (explaining things such as diodes, transistors, etc), tech career, Adobe After Effects, Illustrator, Fireworks etc.

That's all. I can't show you all the appreciation you deserve in a single mail, because I doubt Gmail servers would be able to withstand such a long email.

*Sanjay Wadhwa*

4 Thank you for your mail, Sanjay. We will look at your suggestions, and consider them. The packaging won't be possible because of the vast differences in weather conditions across our great nation. We'll need to stick with recyclable plastic.

*Robert*

✉ I really had no idea where to send the email for the 'Enter' section so I just sent it to the first link given in your mind-blowing magazine. I've been reading Digit since 2006 in my school library. I got the chance to buy one in 2009 and when I did, my life changed. Every single friend of mine now consults me for any tech help.

You guys totally rock and special appreciation to Mr. Robert Sovereign-Smith; your articles are touching, inspiring and most importantly relatable. Honestly your magazine is maha-awesome.

I just wish you'd increase the space for Digit Diary because that's the most epic (after the editorial) thing in your magazine and reading about your team is ultra-fun.

*Achal D. Zoan*

4 Thanks for your mail. We'll try and make Digit Diary bigger :)

*Robert*

✉ This is my first letter to you in my one year experience of reading Digit. It's more than a navigator; it's a really awesome magazine which can transform even a character with a dull personality into a technology geek. I'm really impressed by your contribution in the field of technology. You're doing an amazing job and I hope you'll continue this excellent service.

Well, I have some suggestions for you:

1. Your website thinkdigit.com is good, but due to excessive advertisements seems like a website dedicated to ads. Please improve this.
2. The PC rig you provide is very good, but I suggest recommending AMD FX 8 series instead of Intel core processors because they're far cheaper and equally good in performance. An 8-core processor for ₹12,000 is really worth the price.
3. Lastly, please accelerate your responses to emails. I send you an
