The HD DVR provided by Videocon has pretty much the same specifications as the Tata Sky HD+ and the Airtel Digital TV HD Recorder. Both use a 500GB drive internally, the only difference being that one uses a 3.5" disk and the other a 2.5" one. There is no noticeable performance difference though.

There isn't a notification LED on the Videocon HD DVR to indicate when a recording starts or is in progress, which is a huge omission. From our experience with Tata Sky HD+ and Airtel Digital TV HD Recorder, the red notification LED on the front lets you know when a recording may be in progress.

The picture quality on almost all SD and HD channels is very good. On the same display with the exact same picture adjustments, the SD channels on d2h look considerably crisper than those

on Tata Sky and Airtel Digital TV. All channels on the Videocon d2h have fairly subdued colours when compared to the Tata Sky HD+ and we had to bump up saturation by 20 to get comparable colours. The user interface has serious

problems, its sluggish, unintuitive layout and confusing remote keys that can sometimes duplicate tasks. For

example - going back from a particular spot in the menu, to, let's say, the main menu. Sometimes the X button works, and sometimes the return key works.

At times, the box just hangs and refuses to change channels and the only way around it is to unplug the device. Crude.

Videocon d2h attracts you with the sheer variety of channels on offer, but UI issues are a huge turn off.

Asus Taichi

One display is passé! It's time for two

The ASUS Taichi is clearly an ultrabook that is meant to stand out in Toshiba's lineup. It's almost nothing like the traditional ultrabooks we've become used to. The brushed aluminium unibody finish gives it a premium look and feel that is matched only by the Samsung Series 9 ultrabooks. The keyboard deck and the underside are very well put together. However, the same doesn't follow through completely to the lid, which has a bit too much glass because of the two displays. The hinge is quite taut, but you cannot risk applying too much pressure anywhere on the lid.

The dual display thing is quite neat. Once you have the Asus Utilities set up, you can set the display mode to one or both the 11.6-inch screens. The Full HD

resolution does make the text too small in desktop mode, but setting it to 125% makes it readable at least. A by-product of this resolution is very crisp text. Asus has mastered the art of packing in excellent keyboards in small spaces, as they showed us with the VivoBook. The keys on the Taichi are well-spaced with adequate travel allowing for quick typing.

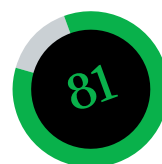

Performance from the Core i7 processor is excellent, and though 4GB of RAM is seems a bit low for a machine costing this much, it doesn't create a bottleneck. The battery will last 4.5 hours with ease, with the brightness set at 60%.

You do pay a lot of money for the Taichi, but this machine blends flair with function with aplomb.
