

Sandisk's Ultrafast SSD

Sandisk Extreme II is an ultrafast SSD built with 19nm process having 550MB/s read and 510MB/s write speed. Bliss for gamers. <http://dgit.in/11hQtm1>

Chrome 27 for iOS

Two weeks after releasing on the desktop and Android, Google has finally announced the availability of its Chrome 27 for iOS.

HP Pavilion m4-1003tx

A good laptop

The design elements are very similar to HP's own, more expensive ENVY dv6 laptop. The lid has the same brushed metal dual tone look, but the keyboard deck gets a black, glossy finish.

The m4 is fairly thin, despite carrying an optical drive, and comes pretty close to ultrabook territory.

The machine scored 3165 in the PC Mark 07 test, a very good score and easily comparable to the more powerful Lenovo Ideapad Y500 that runs an i7. Of course, screen resolution will have something to do with that.

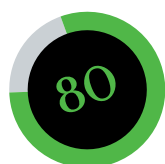

Price
₹49,990

The Pavilion m4 packs in an NVIDIA GeForce 730M (2GB) graphics chip, which is based on the NVIDIA GeForce GT645M. The Pavilion m4-1003tx will be able to handle most games at the 1366 x 768 pixel resolution at medium settings. Our gaming tests were quite satisfactory and the 730M did manage to justify its existence.

The keyboard is one of the better ones across all laptops. Key spacing, and travel is excellent. Unfortunately, the touchpad on the Pavilion m4 doesn't invoke such pleasant and positive words from us. The response at all times is mostly inconsistent when it comes to scrolling and driver updates did not solve the issue. Under very stressful benchmark tests, the Pavilion m4's battery lasted 115 minutes on a single charge. This should easily translate into at least 3.5 hours of backup times under normal conditions.

The performance offered by the Pavilion m4 is very good, and it is built very well. For around ₹.49,000, this is a laptop worth considering.

Byond Phablet P1

An average 5-inch phone

Price
₹10,999

At a 10K price point, the P1 is your run-of-the-mill smartphone. It doesn't bring anything new to the table and its benchmark scores aren't the best in its class either. Its overall performance is average and you do get better performing smartphones at the same price point. There is distinct lag and you will see stutter during heavy multi-tasking. In terms of its looks, it borrows heavily from the Samsung Galaxy family with the white plastic body and physical home buttons.

Spice Stellar Pinnacle Pro

A quad-core smartphone with built in security features

Price
₹14,990

The Pinnacle Pro is an impressive smartphone and it's running a quad-core processor. That CPU also means that games run very well. The camera is also an improvement from what we've seen on competing devices. Even though the performance of the device is great, the display is awful, ruining the experience. The rear of the smartphone has a matte rubberized finish and overall it has a simple candy bar form factor. The call quality from the phone is good at both ends.
