Yes, the Panasonic P51 has a fairly large footprint. The blame cannot squarely be put at the door of the 5-inch display, because we have seen phones pack that in within much smaller form factors – the Samsung Galaxy S4 is the best example. Despite the thick bezels, the phone still is very much pocketable and partly manageable for single hand use, mostly because the P51 is a very slim phone. Built well, and the non-slippery finish on the battery cover helps with the grip. You get two finish options – the white one has an enamel finish while the dark option gets the rubberized back. The battery itself is sealed away and all slots are on the spines – the two SIM slots and the memory card slot. This is the first dual-SIM phone with micro SIM slots.

Price
₹21,500

Panasonic hasn't messed around too much with the Android Jelly Bean UI, except custom icons. The specifications are fairly standard for a phone that costs this much, and the performance is acceptable. Open a bunch of SN and IM apps in the background, and the P51 goes along merrily without slowing down.

One SIM slot will handle 3G connectivity, and the other is restricted to just 2G networks. Call quality is very good, on both SIMs. Battery life, at medium usage, will get you through a day easily.

It is a toss-up between this and the Samsung Galaxy Grand, and we would pick the latter, because of the better support and accessory ecosystem.

Sony Alpha A58

A decent all-rounder

We've consistently maintained that entry level DSLRs often tend to skimp on either the material with which the cameras are built or size. On the Sony A58, we felt neither of these to be true. The contours on the camera's front grip and the thumb rest are incredibly comfortable and shooting with it for hours doesn't really hurt.

The Sony A58 packs a 20 megapixel APS-C sensor coupled with a Bionz processor that allows the A58 to hit a blazingly fast 8 fps burst mode. The screen on the back of the A58, disappointingly, sports a resolution of just 460K dots and does not swivel. The Sony A58 also now comes with a Panorama mode, in-camera HDR, Dynamic Range

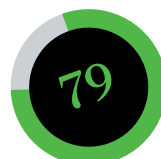

Price
₹32,990

Optimizer and auto object framing, all features that are starting to quickly become standard across DSLRs, but generally don't show up together in one camera. If you're looking for image quality, we're glad to say that the A58 is a

stellar shooter. Shooting in the normal ISO range (100-3200) shouldn't be a problem, any higher and you're in trouble. In real world settings though, we rarely needed to go over ISO 3200. The autofocus system worked pretty well too, locking focus reasonably well. The low light area was a hit or miss though.

All in all, the Sony A58 is an excellent beginner's camera with all the expected bells and whistles.
