

Computex 2013

Computex 2013 happened last month in Taipei. Did you miss anything of it? Just relax and head on to our online coverage: <http://dgit.in/124S8yS>

Something more ...

And how could you just miss our videos and product launches? We even have a Computex special YouTube playlist for you: <http://dgit.in/10CYKWT>

AMD A10-6800K

Richland is here with impressive graphics

AMD announced its latest APU series codenamed Richland, which is based on the same Piledriver architecture seen in the Trinity line of APUs last year. We got a chance to test the flagship Richland APU - A10-6800K which is clocked at 4.1GHz and houses the AMD Radeon HD 8670D integrated graphics component. It has four cores and in terms of specifications seems like a minor update to their Trinity flagship - A10-5800K. The major improvement seems to be that the 6800K natively supports memory configurations of 2133MHz as opposed to 1866MHz support on the 5800K. Also the HD 8670D is 44MHz faster than the one on the 5800K. Just like the Trinity APUs, the Richland APUs will also fit into the AMD FM2 socket.

We tested the A10-6800K on an ASUS F2A85-V Pro

Price
₹12,500

using 8GB Kingston HyperX RAM at 1866MHz and 2133MHz. The performance scores, as expected, excelled in gaming. We got 65 FPS in Resident Evil 5 (1680x1050, medium setting) which is 15FPS higher than A10-5800K and 12FPS over Intel HD 4600 graphics. STALKER: Call of Pripyat gave 42FPS at 1680x1050, medium setting with tessellation enabled which was higher than Intel HD 4600's score of 28FPS. In terms of computing performance, the A10-6800K is much slower than the four-core non-hyper-threaded Intel Core i5-3450S and nowhere close to the Core i7's. As far as rendering and single-threaded operations go, Richland is still beaten by the Intel Core i5 and upwards processors.

If you already have a Trinity APU, more specifically the 5800K, it doesn't make much sense upgrading to the 6800K as the performance improvement is 7 per cent for computing tasks and 25 percent in games. But right now, the ₹10,500 market price seems a lot taking into consideration the minor performance improvements.

ZOTAC GTX 780

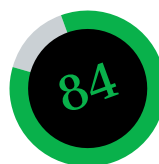

Stock GTX 780 experience

Price
₹49,500

The ZOTAC GTX 780 is exactly similar to the reference NVIDIA GTX 780 we reviewed last month with the same stock clock speeds. Performance wise also it is slower only than the GTX TITAN as far as single GPU cards go. Scores as follows: 3D Mark 11: 4460 Marks; Dirt 3, 1080p Max: 128FPS; Metro Last Light, 1080p max: 34FPS.

We also tested this on a multi-monitor setup where Metro Last Light gave 25FPS at 5760x1080p medium settings. Priced at ₹49,500, the ZOTAC GTX 780 is targeted at a niche audience.

Western Digital WD5000LPVT

An affordable 500GB laptop drive

Price
₹3,600

The Western Digital WD5000LPVT is a 7mm thick, single-platter drive with an unformatted capacity of 465.76GB. Since it belongs to the Blue line of drives, it has a SATA 2 interface and runs at 5400RPM. In terms of real life performance, it gave the following speeds: Sequential/Assorted Read speed (in MB/s): 126 / 98; Sequential/Assorted Write speed (in MB/s): 115 / 83; Intra-drive Sequential / Assorted speed (in MB/s): 27.3 / 28.44. It is 35 per cent faster than the older WD Scorpio Blue 750GB drive. At Rs. 7.7 per GB, the drive is quite decently priced.
